Cosmetic (continued)
reoperative considerations, 56
Crooked nose. See Deviated nose.
Cultural differences, at initial consultation for rhinoplasty, 11

D
Depression, initial consultation for rhinoplasty in patients with, 13
Deviated nose, correction of, 95–107
  buttressing septal support, 98–99
case example, 103–106
nasal osteotomies, 99–100
preoperative assessment, 95–96
  history, 95–96
physical examination, 96
principles of treatment, 96–97
reduction of hypertrophied turbinates, 99
release of mucoperichondrial attachments, 97
sequencing treatment, 100–103
straightening of the septum, 98
surgical exposure, 97
types of deviation, 97
Dorsal hump surgery, 75–85
  classification of dorsal deformities and treatment plan, 75–80
in special cases, 80–82
  narrow nose syndrome, 81
short nasal bones, 80–81
  straight dorsum, 81–82
preoperative analysis, 75
Dorsum, physical examination at initial consultation, 18–19
Dorsum modification, in primary cosmetic rhinoplasty, 44–45

E
Eating disorders, initial consultation for rhinoplasty in patients with, 13–15
Endonasal technique, for internal septrhinoplasty, 109–117
Ethnic variations, at initial consultation for rhinoplasty, 11
  in anatomy of nasal base, 87–88
  rhinoplasty in various ethnic groups, 131–148
  aesthetic considerations in, 131
  African American nose, 133, 135–137
  Asian nose, 133–134, 137–138
  case reports, 135–146
  complications, 146–147
  fibrofatty layer, role in differences of, 131–132
  Hispanic nose, 134, 140–141
  Middle Eastern, Indian, and other South Asian noses, 134–135, 138–140, 141–146

F
Fibrofatty layer, nasal, role in ethnic variations, 131–132

G
Gender differences, at initial consultation for rhinoplasty, 11
Grafting, in cosmetic rhinoplasty, 59–66
  allograft, 61
  alloplast, 61–63
  autograft, 60–61
  graft materials, 60
  specific graft techniques, 63–66
    lateral nasal wall, 66
    lower vault, 64–66
    middle vault, 63–64
    other, 66
    upper vault, 63
  in primary cosmetic rhinoplasty, 45–46
  in revision rhinoplasty, 120–123

H
Hispanic patients. See also Ethnic variations.
rhinoplasty in, 134
  case examples, 140–141
History, medical, at initial consultation for rhinoplasty, 11–16
  body dysmorphic disorder, 13
  depression, 13
  doubtful patients, 13
  eating disorders, 13–15
  excessively complimentary patients, 13
  other issues, 15
  patients ready to “do the surgery now,” 12–13
  patients with minor or imagined deformity, 13
  patients with obsessive-compulsive trait/ disorder, 12
  patients with rude demeanor, 13
  patients with unrealistic expectations, 12
of rhinoplasty, 1–9
  a major reassessment, 5–6
  along comes the wunderkind, 4–5
  era of darkness, 2
  in the beginning, 1–2
  oral and maxillofacial surgery’s role in, 6–8
  reawakening era, 2–4
  social, at initial consultation for rhinoplasty, 16
  surgical, at initial consultation for rhinoplasty, 16

I
Indian patients. See also Ethnic variations.
rhinoplasty in, 134–135
  case examples, 141–146
Initial consultation, for rhinoplasty, 11–24
anesthesia, 22–23
ethnic, cultural, and gender differences, 11
initial consultation, 11–16
medical history, 11–16
social history, 16
surgical history, 16
physical examination, 16–22
dorsum and radix, 18–19
from the profile view, 19–20
nasal airway, 22
nasal tip and base, 20–22
overall nasal symmetry, 18
photographic documentation, 16–18
skin envelope, 18
treatment planning, 22
Internal septorhinoplasty, technique, 109–117

J
Joseph, Dr. Jacques Lewin, in history of rhinoplasty, 4–5

L
Lateral osteotomy, 82–85
airway changes and, 84
changing the technique during, 85
choosing the technique, 84–85
continuous internal, 83
lateral oblique, 82–83
medial, 83–84
percutaneous dotted, 82
Lower lateral cartridges, of nose, applied surgical anatomy of, 34–37
Lymphatic drainage, of the nose, applies surgical anatomy of, 31

M
Medical history. See History, medical.
Middle Eastern patients. See also Ethnic variations.
rhinoplasty in, 134–135
case examples, 138–140
Musculature, of the nose, applied surgical anatomy of, 27–28

N
Narrow nose syndrome, 81
Nasal base modification, in primary cosmetic rhinoplasty, 45
Nasal base surgery, 87–94
anatomic evaluation, 87–88
ethnic variations, 87–88
complications of alar base surgery, 93
asymmetric nostrils, 93
notch formation, 93
over-resection, 93
visible scar, 93
considerations during simultaneous orthognathic surgery and, 89
dynamic changes in anatomy during, 88–89
operative techniques, 89–92
alar release and medialization, 92–93
cinch suture, 92
combination wedge and nostril sill resection, 91
lateral wall debulking, 91–92
narrowing wide columella, 90
nostril sill resection, 91
wedge resection, 90–91
preoperative evaluation, 88
Nasal septum, applied surgical anatomy of, 31–32
septoplasty in conjunction with cosmetic rhinoplasty, 49–58
Nasal tip modifications, 67–74
cephalic lateral cartilage trim, 70
columellar strut, 71
dome refinement, 72–73
in primary cosmetic rhinoplasty, 45
lateral crural modifications, 71–72
medial crura suture, 70–71
multiple layered closure, 74
revision rhinoplasty, 129
rotation control, 73–74
soft tissue elevation, 69–70
surgical approach to, 68–69
tip projection, 73
Nostril sill resection, 90

O
Obsessive-compulsive disorder/trait, initial consultation for rhinoplasty in patients with, 12
Oral and maxillofacial surgery, role in history of rhinoplasty, 6–8
Osteotomy, dorsal. See Dorsal osteotomy.
Over-resection, of nasal base tissue, 93

P
Photographic documentation, at initial consultation for rhinoplasty, 16–18
Physical examination, at initial consultation for rhinoplasty, 11–24
dorsum and radix, 18–19
ethnic, cultural, and gender differences, 11
from the profile view, 19–20
nasal airway, 22
nasal tip and base, 20–22
overall nasal symmetry, 18
photographic documentation, 16–18
skin envelope, 18
Planning, treatment, for rhinoplasty, 22
Profile view, physical examination at initial consultation, 18–19, 19–20

Radix, physical examination at initial consultation, 18–19
Radix modification, in primary cosmetic rhinoplasty, 43–44, 45
Revision rhinoplasty, 119–130
  functional issues, 127–129
  over-resection, 123–127
  scarring, 129
  timing, 119–120
  tip revision, 127
under-resection, 120–123
Rhinoplasty, 1–148
  applied surgical anatomy of nose, 26–38
    blood supply to the nose, 30–31
    external nose, 25–26
    internal nasal valve, 33–34
    internal nose, 31
    lateral wall of nose, 32–33
    lower lateral cartilages and tip of nose, 34–37
      lateral crus, 36–37
      medial crus, 34
      middle (intermediate) crus, 34–35
    lymphatic drainage, 31
    musculature, 27–28
    nasal septum, 31–32
    sensory nerve supply, 28–30
    soft tissue envelope, 26–27
    surgical approaches, 37
    upper lateral cartilage, 32
correction of the crooked nose, 95–107
  buttressing septal support, 98–99
  case example, 103–106
  nasal osteotomies, 99–100
  preoperative assessment, 95–96
    history, 95–96
    physical examination, 96
  principles of treatment, 96–97
  reduction of hypertrophied turbinates, 99
  release of mucoperichondrial attachments, 97
  sequencing treatment, 100–103
  straightening of the septum, 98
  surgical exposure, 97
  types of deviation, 97
dorsal hump surgery and lateral osteotomy, 75–85
  dorsal nose surgery, 75–82
    classification of dorsal deformities and treatment plan, 75–80
    in special cases, 80–82
    preoperative analysis, 75
  lateral osteotomy, 82–85
  airway changes and, 84
  changing the technique during, 85
  choosing the technique, 84–85
  continuous internal, 83
  lateral oblique, 82–83
  medial, 83–84
  percutaneous dotted, 82
ethnic, 131–148
  aesthetic considerations in, 131
  African American nose, 133, 135–137
  Asian nose, 133–134, 137–138
  case reports, 135–146
  complications, 146–147
  fibrofatty layer, role in differences of, 131–132
  Hispanic nose, 134, 140–141
  Middle Eastern, Indian, and other South Asian noses, 134–135, 138–140, 141–146
grafting in cosmetic, 59–66
  allograft, 61
  alloplast, 61–63
  autograft, 60–61
  graft materials, 60
  specific graft techniques, 63–66
    lateral nasal wall, 66
    lower vault, 64–66
    middle vault, 63–64
    other, 66
    upper vault, 63
history of, 1–9
  a major reassessment, 5–6
  along comes the wunderkind, 4–5
  era of darkness, 2
  in the beginning, 1–2
  oral and maxillofacial surgery’s role in, 6–8
  reawakening era, 2–4
initial consultation and examination, 11–24
  anesthesia, 22–23
  ethnic, cultural, and gender differences, 11
  initial consultation, 11–16
    medical history, 11–16
    social history, 16
    surgical history, 16
  physical examination, 16–22
    dorsum and radix, 18–19
    from the profile view, 19–20
    nasal airway, 22
    nasal tip and base, 20–22
    overall nasal symmetry, 18
    photographic documentation, 16–18
    skin envelope, 18
  treatment planning, 22
internal septorhinoplasty technique, 109–117
nasal base surgery, 87–94
  anatomic evaluation, 87–88
  ethnic variations, 87–88
  complications of alar base surgery, 93
    over-resection, 93
    visible scar, 93
considerations during simultaneous orthognathic surgery and, 89
dynamic changes in anatomy during, 88–89
operative techniques, 89–92
alar release and medialization, 92–93
cinch suture, 92
combination wedge and nostril sill resection, 91
lateral wall debulking, 91–92
narrowing wide columella, 90
nostril sill resection, 91
wedge resection, 90–91
preoperative evaluation, 88
nasal tip modifications, 67–74
cephalic lateral cartilage trim, 70
columellar strut, 71
dome refinement, 72–73
lateral crural modifications, 71–72
medial crura suture, 70–71
multiple layered closure, 74
rotation control, 73–74
soft tissue elevation, 69–70
surgical approach to, 68–69
tip projection, 73
primary cosmetic, 39–48
evolution of techniques, 40–41
postoperative care, 46–47
surgical access for, 41–43
closed, 41–42
open, 42–43
treatment plan, 43–46
dorum modification, 44–45
grafts, 45–46
nasal base modification, 45
radix modification, 43–44
specific surgical techniques, 43
tip modification, 45
revision, 119–130
functional issues, 127–129
over-resection, 123–127
scarring, 129
timing, 119–120
tip revision, 127
under-resection, 120–123
septoplasty in conjunction with cosmetic, 49–58
 cosmetic indications for, 55–56
 early complications from, 56–57
 historical summary of, 49–50
 indications for, 52–54
 late complications from, 57–58
 operative approach to nasal septum, 54
 pearls, 58
 postoperative management, 56
 procedure steps, 54–55
relevant nasal septal anatomy, 50–52
reoperative considerations, 56
S
Scarring, visible, after alar base surgery, 93
with revision rhinoplasty, 129
Sensory nerve supply, to the nose, applied surgical anatomy of, 28–30
Septoplasty, in conjunction with cosmetic rhinoplasty, 49–58
 cosmetic indications for, 55–56
 early complications from, 56–57
 historical summary of, 49–50
 indications for, 52–54
 late complications from, 57–58
 operative approach to nasal septum, 54
 pearls, 58
 postoperative management, 56
 procedure steps, 54–55
 relevant nasal septal anatomy, 50–52
 reoperative considerations, 56
Septorhinoplasty, internal technique, 109–117
Septum, nasal. See Nasal septum and Septoplasty.
Sill resection, nostril, 90
Skin envelope, physical examination at initial consultation, 18
Social history, at initial consultation for rhinoplasty, 16
Soft tissue envelope, of the nose, applied surgical anatomy of, 26–27
Surgical access, for primary cosmetic rhinoplasty, 41–43
closed, 41–42
open, 42–43
Suture techniques, in nasal tip modifications, 70–71
Symmetry, nasal, at initial physical examination, 18
T
Tip, nasal, physical examination at initial consultation, 20
Tip, nasal. See Nasal tip modifications.
U
Under-resection, in revision rhinoplasty, 120–123
Unrealistic expectations, initial consultation for rhinoplasty in patients with, 12
Upper lateral cartridge, applied surgical anatomy of, 32
W
Wedge resection, in nasal base surgery, 90
