Index

Note: Page numbers of article titles are in **boldface** type.

A

Abuse, child, 511–517
  craniofacial injuries and, 514–516
  epidemiology and ecology of, 511–512
  presentation and workup, 512–514
Acne vulgaris, facial, in children, 499–502
Adenitis, cervical, pediatric neck masses due to, 463–464
Airway abnormalities, 325–336
  anatomic and physiologic considerations, 326–327
  clinical presentation and diagnosis, 327–332
  sleep-disordered breathing and, 332–334
  risk of secondary to corrective surgery, 332–333
  treatment of, 333–334
    nonsurgical, 333–334
    surgical, 334
Anatomy, in orbital cellulitis, 488–489
  in pediatric airway abnormalities, 326–327
Anesthesia, for surgical management of pediatric facial soft tissue injuries, 367
Antimicrobials, for pediatric orbital cellulitis, 492–493
Arteriovenous malformations, in children, 451–452
Aspergillosis, orbital cellulitis due to, 489–490
Auricular deformities. See Ear reconstruction.
Avulsive wounds, facial, surgical management in pediatric patients, 371

B

Bites, facial, surgical management in pediatric patients, 370–371
Bone tumors, craniofacial fibrous dysplasia, 427–441
Branchial cleft anomalies, congenital, 459–460
Breathing, sleep-disordered. See Sleep-disordered breathing.

C

Capillary malformations, in children, 447–448
Cellulitis, pediatric orbital (postseptal), 472, 487–496
  pediatric periorbital (preseptal), 471–472
Cervical adenitis, pediatric neck masses due to, 463–464
Child abuse. See Maltreatment, child.
Children. See Pediatrics.
Congenital melanocytic nevi, facial, in children, 505–506
Congenital neck masses, 459–463
  branchial cleft anomalies, 459–460
  dermoid cysts and teratomas, 461–462
  lymphatic malformations, 462–463
  thyroglossal duct cyst, 460–461
Cranio-orbital dysmorphology, in pediatric craniofacial surgery, 388
Craniofacial disorders, dermoids, pediatric, 417–425
  fibrous dysplasia, 427–441
  pediatric airway abnormalities secondary to corrective surgery for, 332–333
Craniofacial fractures, in growing patients, 355–358
  frontal bone and superior orbital, 355
  frontal sinus and fronto-basilar, 355–356
  midface, 358
  nasal, 357–358
  naso-orbital-ethmoid, 356–357
  orbital, 357
  zygomaticomaxillary complex, 357
Craniofacial injuries, child abuse and, 514–516
Craniofacial surgery, growth and development considerations for pediatric, 377–396
  clinical evaluation of craniofacial growth, 387–388
  concepts of, 379–381
  growth discrepancies involving craniofacial skeleton, 378–379
  regions of craniofacial, 381–387
    cranium, 381
    mandible, 383–387
    maxilla, 382–383
    orbits, 381
    zygome, 381–382
  surgical management considerations, 388–394
    cranio-orbital dysmorphology, 388
    mandibular hyperplasia, 389–390
    mandibular hypoplasia, 388–389
    maxillary hypoplasia, 390–392
    vertical maxillary excess, 392–394
Cranium, pediatric growth and development of, 381
Cysts, facial, in children, 502–503
  dermoid, 503
  epidermal inclusion, 502–503

D

Dentoalveolar fractures, in growing patients, 358–359
Dermatologic lesions, facial, in children, 497–509
  acne vulgaris, 499–502
**Index**

Dermatologic (*continued*)
dermoid cyst, 503
epidermal inclusion cyst, 502–503
infectious, 497–499
impetigo, 499
molluscum contagiosum, 497–498
tinea, 498–499
warts, 498
melanotic lesions, 505–507
congenital melanocytic nevi, 505–506
Spitz nevi, 506–507
pilomatricoma, 503–505
port-wine stain, 507
Dermoid cysts, congenital neck masses, 461–462
facial, in children, 503
Dermoids, craniofacial and orbital, in children, 417–425
classification, 418–419
evaluation and treatment, 419–424
calvarial lesions, 422–424
frontonasal, lesions, 421–422
frontotemporal and orbital lesions, 419–421
histopathology, 418
origins, 418
Development. See Growth and development.
Dog bites, facial, surgical management in pediatric patients, 370–371
Dysmorphology, cranio-orbital, in pediatric craniomaxillofacial surgery, 388

**E**

Ear infections, pediatric middle, 469–470
Ear reconstruction, in children, 397–406
for acquired auricular deformities, 398–403
burn injuries and keloids, 403
helical rim defects, 398–399
lobular defects, 399–400
middle and lower defects, 399
postoperative care, 403
superior defects, 399
total and subtotal defects, 400–403
for congenital auricular deformities, 403–406
constricted ear, 406, 407
cryptotia, 406
Stahl ear, 406
Ecology, of child maltreatment, 511–512
Epidemiology, of child maltreatment, 511–512
Epidermal inclusion cysts, facial, in children, 502–503

**F**

Facial skeletal trauma, in growing patients, 351–364
craniofacial fractures, 355–358
frontal bone and superior orbital, 355
frontal sinus and fronto-basilar, 355–356
midface, 358
nasal, 357–358
naso-orbital-ethmoid, 356–357
orbital, 357
zygomatico-maxillary complex, 357
general considerations, 351–355
craniofacial growth and development, 351–352
epidemiology, 352–354
perioperative management, 354–355
prevention, 354
surgical anatomy, 352
mandibular and dentoalveolar fractures, 358–362
dentoalveolar, 358–359
mandibular body and angle, 360
mandibular condyle, 360–362
symphyseal and parasymphyseal mandibular, 359–360
special considerations, 362–363
Risdon cable, 362–363
role and use of internal fixation, 362
Facial soft tissue injuries, pediatric, 365–375
primary surgical management, 365–371
secondary surgical management, 371–374
Fibromatosis colli, pediatric neck masses due to, 464–465
Fibrous dysplasia, craniofacial, 427–441
classification, 427
diagnosis, 428–432
CT scan, 428–430
genetic testing, 432
histopathology, 430–431
MRI, 430
plain radiography, 428
scintigraphy, 430
long-term considerations, 436–438
dental, 436–437
malignant transformation, 438
orbital, 437–438
management, 433–436
medical, 433
surgical, 433–436
pathogenesis and natural history, 427–428
prognosis, 432–433
Fractures, craniofacial, in growing patients, 355–358
frontal bone and superior orbital, 355
frontal sinus and fronto-basilar, 355–356
midface, 358
nasal, 357–358
naso-orbital-ethmoid, 356–357
orbital, 357
zygomatico-maxillary complex, 357
mandibular and dentoalveolar, in growing patients, 358–362
dentoalveolar, 358–359
mandibular body and angle, 360
mandibular condyle, 360–362
sympyseal and parasymphseal mandibular, 359–360
skull, 344–349
Frontal bone, fractures in growing patients, 355
Frontal sinus, fractures in growing patients, 355–356
Fungal infections, orbital cellulitis due to, 489–490

G
Genetic testing, for craniofacial fibrous dysplasia, 432
Group A beta-hemolytic streptococcocal (GABHS)
pharyngitis, pediatric, 476–482
Growing skull fractures, pediatric, 345–349
pathophysiology, 345–347
surgical treatment, 347–349
Growth and development, considerations for
pediatric craniomaxillofacial surgery, 377–396
clinical evaluation of craniofacial growth,
387–388
concepts of, 379–381
growth discrepancies involving craniofacial
skeleton, 378–379
regions of craniofacial, 381–387
 cranium, 381
 mandible, 383–387
 maxilla, 382–383
 orbits, 381
zygome, 381–382
surgical management considerations, 388–394
cranio-orbital dysmorphology, 388
mandibular hyperplasia, 389–390
mandibular hypoplasia, 388–389
maxillary hypoplasia, 390–392
vertical maxillary excess, 392–394
Growth discrepancy, in craniofacial skeleton,
379–379

H
Head injuries, pediatric, 337–350
 scalp injuries, 337–344
 skull fractures, 344–349
 Hemangiomas, in children, 443–447
 Human papillomavirus (HPV), pediatric, affecting
 head and neck, 482–483
 Hyperplasia, mandibular, in pediatric
 craniomaxillofacial surgery, 389–390
 Hypoplasia, mandibular, in pediatric
 craniomaxillofacial surgery, 388–389
 maxillary, in pediatric craniomaxillofacial surgery,
 390–392

I
Imaging, in diagnosis of craniofacial fibrous
dysplasia, 428–432
 in pediatric orbital cellulitis, 490–492
Impetigo, facial lesions in children due to, 499
Infectious disease, unusual pediatric head and neck
infections, 469–486
 human papillomavirus, 483–484
 Lyme disease, 482–483
 lymphadenitis and lymphadenopathy, 472–476
 pharyngitis, 476–482
 sinus/orbit/middle ear, 469–472
Infectious lesions, facial, in children, 497–499
 impetigo, 499
 molluscum contagiosum, 497–498
 tinea, 498–499
 warts, 498
Inflammatory lesions, pediatric neck masses due to,
463–464
Injuries, head, 337–350
 scalp injuries, 337–344
 skull fractures, 344–349
 pediatric soft tissue, 365–375
 primary surgical management, 365–371
 secondary surgical management, 371–374
Internal fixation, role and use in pediatric maxillofacial
trauma, 362–363

L
Lipomas, benign pediatric neck masses due to, 466
Lyme disease, pediatric, affecting head and neck,
482–483
Lymphadenitis, pediatric, 472–476
Lymphadenopathy, pediatric, 472–476
Lymphatic malformations, congenital neck masses
due to, 462–463
 in children, 448–450
Lymphoma, pediatric neck masses due to, 466–467

M
Malignant neoplasms, pediatric neck masses due to,
466–467
Malignant transformation, of craniofacial fibrous
dysplasia, 438
Maltreatment, child, 511–517
 craniofacial injuries and, 514–516
 epidemiology and ecology of, 511–512
 presentation and workup, 512–514
Mandatory reporting, of suspected child abuse and
maltreatment, 511
Mandible, pediatric growth and development of,
383–387
Mandibular fractures, in growing patients, 358–362
 mandibular body and angle, 360
 mandibular condyle, 360–362
 symphseal and parasymphseal mandibular,
 359–360
Mandibular hyperplasia, in pediatric
 craniomaxillofacial surgery, 389–390
Index

Mandibular hypoplasia, in pediatric craniomaxillofacial surgery, 388–389
Maxilla, pediatric growth and development of, 382–383
Maxillary excess, vertical, in pediatric craniomaxillofacial surgery, 392–394
Maxillary hypoplasia, in pediatric craniomaxillofacial surgery, 390–392
Melanocytic nevi, congenital, facial, in children, 505–506
Melanotic lesions, facial, in children, 505–507
Molluscum contagiosum, facial lesions in children due to, 497–498
Monostotic craniofacial fibrous dysplasia, 427
Mucormycosis, orbital cellulitis due to, 489–490

N
Nasal fractures, in growing patients, 357–358
Nasal reconstruction, in children, 406–415
Nerve and duct injuries, facial, surgical management in pediatric patients, 369–370
Neurofibromas, benign pediatric neck masses due to, 465–466
Neurofibromatosis, benign pediatric neck masses due to, 465–466
Nevi, facial, in children, 505–507

O
Obstructive sleep apnea, pediatric airway abnormalities and, 325–336
Orbital cellulitis, pediatric, 472
Orbital fractures, in growing patients, 357
Orbits, pediatric growth and development of, 381

P
Pediatric maxillofacial surgery, 325–517
airway abnormalities, 325–336
anatomic and physiologic considerations, 326–327
clinical presentation and diagnosis, 327–332
sleep-disordered breathing and, 332–334
risk of secondary to corrective surgery, 332–333
treatment of, 333–334
child maltreatment, 511–517
craniofacial injuries and, 514–516
epidemiology and ecology of, 511–512
presentation and workup, 512–514
craniofacial and orbital dermoids, 417–425
classification, 418–419
evaluation and treatment, 419–424
histopathology, 418
origins, 418
craniofacial fibrous dysplasia, 427–441
classification, 427
diagnosis, 428–432
long-term considerations, 436–438
management, 433–436
pathogenesis and natural history, 427–428
prognois, 432–433
ear and nose reconstruction, ear, 397–406
nose, 406–415
facial dermatologic lesions, 497–509
acne vulgaris, 499–502
dermoid cyst, 503
epidermal inclusion cyst, 502–503
infectious, 497–499
melanotic lesions, 505–507
bilomatomatrace, 503–505
port-wine stain, 507
facial skeletal trauma in growing patients, 351–364
craniofacial fractures, 355–358
general considerations, 351–355
mandibular and dentoalveolar fractures, 358–362

Index
special considerations, 362–363
growth and development considerations for,
clinical evaluation of craniofacial growth, 387–388
concepts of, 379–381
growth discrepancies involving craniofacial
skeleton, 378–379
regions of craniofacial, 381–387
surgical management considerations, 388–394
head injuries, 337–350
scalp injuries, 337–344
skull fractures, 344–349
infections of head and neck, 469–486
human papillomavirus, 483–484
Lyme disease, 482–483
lymphadenitis and lymphadenopathy, 472–476
pharyngitis, 476–482
sinus/orbit/middle ear, 469–472
neck masses, 457–468
background, 458–459
benign neoplasms, 465–466
congenital lesions, 459–463
embryology and anatomy, 458
inflammatory lesions, 463–464
malignant neoplasms, 466–467
noninflammatory benign lesions, 464–465
sinonasal disease and orbital cellulitis, 487–496
anatomic considerations, 488–489
classification systems, 489
controversy regarding, 494–495
epidemiology, 487–488
imaging, 490–492
laboratory data, 490
management, 492–494
microbiology, 489–490
surgical technique, 495
soft tissue injuries, 365–375
primary surgical management, 365–371
secondary surgical management, 371–374
vascular anomalies, 443–455
hemangiomas, 443–447
vascular malformations, 447–452
Periorbital cellulitis, pediatric, 471–472
Pharyngitis, pediatric Group A beta-hemolytic streptococcal, 476–482
Pilomatrixcoma, facial lesions in children due to, 503–505
Polyostotic craniofacial fibrous dysplasia, 427
Port-wine stain, 507
Postseptal orbital cellulitis, pediatric, 472
Preseptal cellulitis, pediatric, 471–472

R
Reconstructive surgery, ear and nose, in children, 397–416
ear, 397–406
nose, 406–415
Reporting, mandatory, of suspected child abuse and maltreatment, 511
Risdon cable, in pediatric maxillofacial trauma, 362–363

S
Scalp injuries, pediatric, 337–344
avulsive wounds, 340–341
complex wounds, 339–340
initial evaluation, 338–339
scalp flaps, 341
small wounds, 339
tissue expansion, 341–344
Sinonasal disease, orbital cellulitis and, 487–496
anatomic considerations, 488–489
classification systems, 489
controversy regarding, 494–495
epidemiology, 487–488
imaging, 490–492
laboratory data, 490
management, 492–494
microbiology, 489–490
surgical technique, 495
Sinus infections, pediatric, 469–472
Skeletal trauma, facial. See Facial skeletal trauma.
Skull fractures, pediatric, 344–349
growing, 345–349
Sleep-disordered breathing, related to pediatric
airway abnormalities, 332–334
risk of secondary to corrective surgery, 332–333
treatment of, 333–334
nonsurgical, 333–334
surgical, 334
Soft tissue injuries, pediatric, 365–375
primary surgical management, 365–371
secondary surgical management, 371–374
Spitz nevi, facial, in children, 506–507
Surgical management, ear and nose reconstruction in
children, 397–416
growth and development considerations for
pediatric maxillofacial, 377–396
clinical evaluation of craniofacial growth, 387–388
concepts of, 379–381
growth discrepancies involving craniofacial
skeleton, 378–379
regions of craniofacial, 381–387
cranium, 381
mandible, 383–387
maxilla, 382–383
orbits, 381
zygome, 381–382
surgical management considerations, 388–394
Surgical (continued)
  cranio-orbital dysmorphology, 388
  mandibular hyperplasia, 389–390
  mandibular hypoplasia, 388–389
  maxillary hypoplasia, 390–392
  vertical maxillary excess, 392–394
  of craniofacial fibrous dysplasia, 433–436
  of facial skeletal trauma in pediatric patients, 351–364
  of pediatric orbital cellulitis, 493–495
    controversy in, 494–495
    technique, 495
  of pediatric sleep-disordered breathing due to airway abnormalities, 334
  of pediatric soft tissue injuries, 365–375
    primary surgical management, 365–371
    secondary surgical management, 371–374

T
  Teratomas, congenital neck masses, 461–462
  Thyroglossal duct cyst, congenital, 460–461

Tinea, facial lesions in children due to, 498–499
Trauma. See Injuries, Fractures and Abuse, child.

V
  Vascular anomalies, in children, 443–455
    hemangiomas, 443–447
    vascular malformations, 447–452
      fast-flow, 451–452
      slow-flow, 447–451
  Venous malformations, in children, 450–451
  Vertical maxillary excess, in pediatric craniomaxillofacial surgery, 392–394

W
  Warts, facial, in children, 498

Z
  Zygoma, pediatric growth and development of, 381–382
  Zygomaticomaxillary complex, fractures in growing patients, 357
