Index

Note: Page numbers of article titles are in boldface type.

A
Aesthetic surgery, of orbits and eyelids, 665–695
   aging effects on periorbit, 672–673
   autologous fat transfer for, 689–690
   brow and forehead in periorbital rejuvenation,
   673–677
   anterior hairline brow lift, 674
   coronal brow lift, 674
   direct brow lift, 676
   endoscopic brow lift, 675
   limited incision brow lift, 674–675
   postoperative care and complications,
   676–677
   transpalpebral brow lift, 676
   laser skin resurfacing in, 691–693
   lower eyelid rejuvenation, 682–686
   canthopexy, 684–685
   canthoplasty, 682–684
   combination approach, 685
   postoperative care and complications,
   685–686
   subcilliary approach, 684
   transconjunctival approach, 682
   midface in periorbital rejuvenation, 686–689
   endoscopic lift, 687–688
   postoperative care and complications, 688
   preoperative evaluation, 665–669
   of forehead and eyebrow, 666–667
   of lower eyelid, 667–668
   of midface, 668–669
   of upper eyelid, 667
   photography, 669
   relevant surgical anatomy of periorbit, 669–672
   subdermal fillers in, 690–691
   upper eyelid rejuvenation, 677–682
   Asian eyelid surgery, 678, 680–682
   postoperative care and complications, 682
   revision upper blepharoplasty, 678
   upper blepharoplasty, 677–678
Aging, changes in and around the orbit with, 550–554
   bony, 551–554
   skin and soft tissue, 551
   effects on the periorbit, 672–673
Allergies, history of, in ophthalmoscopic examination,
559–560
Allogeneic materials, for reconstruction of internal
orbit, 616
   homologous bone, 616
   homologous cartilage, 616–617
   resorbable, 621–623
   nonresorbable, 617–621
   hydroxyapatite, 620–621
   Medpor Titan implant, 619–620
   metallic mesh, 617–619
   Nylon SupraFoil, 620
   silicones and Teflon, 621
   polydioxanone plates, 622–623
   polyglyclactin, 622
   polyactic acid, 621–622
Alloplastic materials, for reconstruction of internal
orbit, 617–623
   nonresorbable, 617–621
   hydroxyapatite, 620–621
   Medpor Titan implant, 619–620
   metallic mesh, 617–619
   Nylon SupraFoil, 620
   silicones and Teflon, 621
   resorbable, 621–623
   polydioxanone plates, 622–623
   polyglyclactin, 622
   polyactic acid, 621–622
Anatomy, orbital, blood supply, 533–534
   bulbous sheath or tenons capsule, 531
   conjunctiva, 531
   eyelids, 525–526
   floor of, 526
   for late correction of orbital deformities,
   650–651
   for transcutaneous surgical approach,
   579–582
   foramen, fissures, tubercles, and crests,
   527–528
   in growth and development, 545–546
   interior oblique, 533
   lacrimal gland, 532
   lateral canthus, 531
   levator superior is and superior oblique,
   532–533
   Lockwood's ligament, 531
   medial and lateral check ligaments, 531
   medial canthus, 529
   medial wall of, 526
   muscles and actions, 530
   muscles of extraocular movement, 532
   of the periorbit, for aesthetic surgery, 669–672
   on CT and CBCT imaging, 539–542
   orbital fat, 531–532
   osteology, 526
   periorbita, 531
   rectus muscles, 533
   roof and lateral wall of, 526–527
   septum orbitale, 529
   size, shape, and purpose, 525–526
   tarsal plates, 529–530
   variations in, 542
   venous and lymphatic drainage, 534–536

http://dx.doi.org/10.1016/S1042-3699(12)00155-0

Anatomy (continued)
Whitnall’s ligament, 531
Antibiotics, for internal orbital fractures, 636
Anticholinergics, during internal orbital reconstruction, 637
for internal orbital fractures, 637
Asians, eyelid surgery in, 678, 680–682
Autogenous materials, for reconstruction of internal orbit, 613–616
bone, 613–615
cartilage, 615–616
Autologous fat, transfer of, in periorbital rejuvenation, 689–690

B
Biomaterials, for reconstruction of internal orbit, 609–627, 655–658
alogeneic materials, 616–617, 657
alloplastic materials, 616, 658
alloplasts, 617
autogenous materials, 613–616, 655–656
characteristics of, 609–611
considerations for internal orbit, 611–613
nonresorbable materials, 617–621
resorbable alloplasts, 621–623
selection of, 613
Blepharoplasty, revision upper, 678
upper, 677–678
Blood supply, to the orbit, 533–534
Blow-out. See Fractures, orbital and Trauma.
Bone, osseous anatomy on CT and CBCT imaging, 539–543
Bony grafts, orbital reconstruction with, 613–615, 616
autogenous, 613–615, 656
homologous, 616
Brow, effects of aging on, 673
examination of, 666
in periorbital rejuvenation, 673–677
anterior hairline brow lift, 674
coronal brow lift, 674
direct brow lift, 676
endoscopic brow lift, 675
limited incision brow lift, 674–675
postoperative care and complications, 676–677
transpalpebral brow lift, 676

C
Canals, orbital, on CT and CBCT imaging, 541–542
Canthopexy, for rejuvenation of lower eyelid, 684–685
Canthoplasty, for rejuvenation of lower eyelid, 682–684
Canthus, lateral, anatomy of, 531
medial, anatomy of, 529
Cartilage, orbital reconstruction with, 615–617
autogenous, 615–616, 657
homologous, 616–617
Computed tomography (CT), and CBCT imaging assessment of the orbit, 537–543
anatomic accuracy, 538
attenuation values, 539
data visualization, 538
dose, 539
Nyquist sampling frequency, 538–539
orbital anatomy as seen by, 539–542
signal to noise ratio, 539
volume averaging, 539
role in planning for prosthetic reconstruction of orbit/globe, 702–703
Cone beam computed tomography (CBCT), imaging assessment of the orbit with, 537–543
anatomic accuracy, 538
attenuation values, 539
data visualization, 538
dose, 539
Nyquist sampling frequency, 538–539
orbital anatomy as seen by, 539–542
signal to noise ratio, 539
volume averaging, 539
Confrontational fields, in visual field testing, 567
Congenital deformities, of the orbit, 547–550
anophthalmia/microphthalmia, 548
Apert syndrome, 549
craniosynostosis, 548–549
Crouzon syndrome, 549
cystic anomalies of the orbit, 548
facial clefting syndrome, 549–550
hypertelorism and hypotelorism, 550
meningoencephalocele, 550
other rare anomalies, 550
Pfeiffer syndrome, 549
Conjunctiva, anatomy of, 531

D
Deep orbit, anatomy of, 651
Development, of the orbit, 545–555
changes with aging, 550–554
bony, 551–554
skin and soft tissue, 551
congenital deformities, 547–550
fetal development, 546–547
extraocular muscle, 547
lacriimal system, 547
sinus formation, 547
influence of eye growth and migration, 546
relevant anatomy, 545–546
muscular, 545–546
osseous, 545
Dilated fundus examination, in surgical ophthalmoscopic examination, 568–571
posterior segment injuries, 570
retinal detachments, 570
traumatic optic neuropathy, 571
Diplopia, as complication of orbital surgery, 661–662
as indication for surgery in orbital fractures, 653
in surgical ophthalmologic examination, 565–567
Dissection, internal orbital, 637–640
  medial wall, 639–640
  orbital floor, 637–639
Drainage, venous and lymphatic, of the orbit, 534–536
Dissection, internal orbital, 637–640
  medial wall, 639–640
  orbital floor, 637–639
Diplopia, as complication of orbital surgery, 661–662
as indication for surgery in orbital fractures, 653
in surgical ophthalmologic examination, 565–567
Dissection, internal orbital, 637–640
  medial wall, 639–640
  orbital floor, 637–639
Drainage, venous and lymphatic, of the orbit, 534–536

E
Ectropion, as complication of orbital surgery, 662
Endoscopy, brow lift using, 675–676
  midface lift using, 687–689
Enophthalmos, as complication of orbital surgery, 662
as indication for surgery in orbital fractures, 653–654
Entropion, as complication of orbital surgery, 662
Enucleation, orbital, 698, 707–708
Ethmoidal foramen, anterior and posterior, 527
Exenteration, orbital, 700
Examination, ophthalmologic. See Ophthalmologic examination.
Exenteration, orbital, 700
  advantages of prosthetic rehabilitation of defects from, 700
  disadvantages of prosthetic rehabilitation of defects from, 700–701
  performance of, 701
  orbital, transcutaneous surgical approach to, 586–587
Extraocular muscles, motility and diplopia in surgical ophthalmologic examination, 565–567
Eyelids, anatomy of, 528–529
  effects of aging on, 673
  rejuvenation surgery, 677–686
    lower eyelid, 682–686
      canthopexy, 684–685
      canthoplasty, 682–684
      combination approach, 685
      postoperative care and complications, 685–686
      subciliary approach, 684
      transconjunctival approach, 682
    upper eyelids, 677–682
      Asian eyelid surgery, 678, 680–682
      postoperative care and complications, 682
      revision upper blepharoplasty, 678
      upper blepharoplasty, 677–678
Fat, orbital, anatomy of, 531–532
  transfer of autologous, in periorbital rejuvenation, 689–690
Fillers, subdermal, role in periorbital rejuvenation, 690–691
Fissures, inferior orbital, anatomy of, 651
  orbital, anatomy of, 527–528
  orbital, on CT and CBCT imaging, 541
Fluid management, during internal orbital reconstruction, 637
Foramina, orbital, on CT and CBCT imaging, 541
Forehead, effects of aging on, 673
  examination of, 666–667
  in periorbital rejuvenation, 673–677
Fractures, late correction of orbital deformities due to, 649–663
  orbital trauma, 629–648
  orbital, 698, 707–708
Fundoscopy, dilated fundus examination in ocular trauma, 568–571
  posterior segment injuries, 570
  retinal detachments, 570
  traumatic optic neuropathy, 571

G
Globe, prosthetic reconstruction of orbit and, 697–712
Hydroxyapatite, orbital reconstruction with, 620–621
Hyperbaric oxygen therapy, in irradiated patients undergoing prosthetic reconstruction of orbit, 711

H
History, in surgical ophthalmologic examination, 558–560
  family, 560
  medications, 560
  of allergies, 559–560
  of present illness, 558–559
  past medical history, 559
  past ocular history, 559
Hydroxyapatite, orbital reconstruction with, 620–621
Hyperbaric oxygen therapy, in irradiated patients undergoing prosthetic reconstruction of orbit, 711

I
Imaging, CT and CBCT assessment of the orbit, 537–543
  anatomic accuracy, 538
  attenuation values, 539
  data visualization, 538
  dose, 539
  Nyquist sampling frequency, 538–539
  orbital anatomy as seen by, 539–542
  signal to noise ratio, 539
  volume averaging, 539
  for late reconstruction of orbital deformities, 662–653
  of orbital trauma, 631
Implants. See Prosthetic reconstruction.
Infraorbital nerve, anatomy of, 651
Index

Injuries, orbital. See Trauma, orbital.

Intraocular pressure, in surgical ophthalmologic examination, 565

L

Lacrimal gland, anatomy of, 532
Laser skin resurfacing, 691–693
Late orbital reconstruction. See Reconstruction.
Levator superioris, anatomy of, 532–533
Lockwood’s ligament, 531
Lower eyelid, effects of aging on, 673
rejuvenation surgery, 682–686
canthopexy, 684–685
canthoplasty, 682–684
combination approach, 685
postoperative care and complications, 685–686
subciliary approach, 684
transconjunctival approach, 682
Lymphatic drainage, of the orbit, 534–536

M

Materials, for reconstruction. See Biomaterials.
Medications, history of, in ophthalmoscopic examination, 560
Medpor Titan implant, orbital reconstruction with, 619–620, 658
Mesh, metallic, for reconstruction of internal orbit, 617–619
Metallic mesh, for reconstruction of internal orbit, 617–619, 658
Midface, effects of aging on, 673
examination of, 668–669
in periorbital rejuvenation, 686–689
endoscopic lift, 687–688
postoperative care and complications, 688
Motility, and diplopia, in surgical ophthalmologic examination, 565–567
deficits in, as complication of orbital surgery, 662
ocular, as indication for surgery in orbital fractures, 653
Muscles, of extraocular movement, anatomy of, 532
diplopia and, in surgical ophthalmoscopic examination, 565–567
orbital, actions of, 530
rectus, anatomy of, 533
Muscular anatomy, in orbital growth and development, 545–546

N

Nasolacrimal canal, 527
on CT and CBCT, 542
Neoplasms, orbital, surgical approaches to, 573–607
Nylon SupraFoil implant, orbital reconstruction with, 620

O

Oblique, inferior, anatomy of, 533
superior, anatomy of, 532–533
Ophthalmologic examination, in ocular trauma cases, 557–572
allergies, 559
dilated fundus examination, 568–571
family history, 560
history of present illness, 558
intraocular pressure, 565
medications, 560
motility and diplopia, 565–567
past medical history, 559
past ocular history, 559
physical examination, 560–562
pupils, 563–565
slit-lamp examination, 567–568
vision, 562–563
visual field testing, 567
Optic canal, 528
on CT and CBCT, 541–542
Optic neuropathy, dilated fundus examination of traumatic, 571
Orbit, 525–712
aesthetic surgery of eyelids and, 665–695
aging effects on periorbit, 672–673
autologous fat transfer for, 689–690
brow and forehead in periorbital rejuvenation, 673–677
laser skin resurfacing in, 691–693
lower eyelid rejuvenation, 682–686
midface in periorbital rejuvenation, 686–689
preoperative evaluation, 665–669
of forehead and eyebrow, 666–667
of lower eyelid, 667–668
of midface, 668–669
of upper eyelid, 667
photography, 669
relevant surgical anatomy of periorbit, 669–672
subdermal fillers in, 690–691
upper eyelid rejuvenation, 677–682
anatomy of, 525–536
blood supply, 533–534
bulbous sheath or tenons capsule, 531
conjunctiva, 531
eyelids, 528–529
floor of, 526
foramen, fissures, tubercles, and crests, 527–528
interior oblique, 533
lacrimal gland, 532
lateral canthus, 531
levator superioris and superior oblique, 532–533
Lockwood’s ligament, 531
medial and lateral check ligaments, 531
medial canthus, 529
medial wall of, 526
muscles and actions, 530
muscles of extraocular movement, 532
orbital fat, 531–532
osteology, 526
 периорита, 531
rectus muscles, 533
roof and lateral wall of, 526–527
septum orbitale, 529
size, shape, and purpose, 525–526
tarsal plates, 529–530
venous and lymphatic drainage, 534–536
Whitnall’s ligament, 531
biomaterials for reconstruction of internal, 609–627
allogeneic materials, 616–617
alloplastic materials, 616
alloplasts, 617
autogenous materials, 613–616
characteristics of, 609–611
considerations for internal orbit, 611–613
nonresorbable materials, 617–621
resorbable alloplasts, 621–623
selection of, 613
CT and CBCT imaging of, 537–543
anatomic accuracy, 538
attenuation values, 539
data visualization, 538
dose, 539
Nyquist sampling frequency, 538–539
orbital anatomy as seen by, 539–542
signal to noise ratio, 539
volume averaging, 539
growth and development of, 545–555
changes with aging, 550–554
congenital deformities, 547–550
fetal development, 546–547
influence of eye growth and migration, 546
relevant anatomy, 545–546
late correction of fractures of, 649–663
diagnosis, 651–652
imaging techniques, 652–653
indications for surgery, 653–654
diplopia, 653
enophthalmos, 653–654
lack of ocular motility, 653
materials for reconstruction, 655–658
allogeneic materials, 657
alloplastic materials, 658
autogenous materials, 655–657
orbital anatomy, 650–651
secondary reconstruction, 654–655
complications, 660–663
of internal orbit, 658–660
timing of surgery, 654
prosthetic reconstruction of the globe and, 697–712
advantages of, 700
anophthalmic socket, 707
definitions of terms, 688–700
dermis fat graft, 708
disadvantages of, 700–701
enucleation, 707–708
evisceration, 707
fabrication of ocular prosthesis, 708–709
fabrication of orbital prosthesis, 704–706
history of, 697–698
home care of orbital prosthesis, 706–707
implant placement procedure, 703–704
in radiated patients and hyperbaric oxygen therapy, 711
maintenance of ocular prosthesis, 709
ocular implants, 708
orbital exenteration, 700
performance of, 701
partial facial transplant versus prosthesis, 709–711
postoperative care of ocular prosthesis, 709
role of CT and stereolithographic model in planning, 702–703
soft tissue preparation, 701–702
debulking previous reconstructive flaps, 701–702
ipsilateral balancing brow lift, 702
surgical approaches to, 573–607
clinical outcomes and complications, 596–598
navigation-assisted, 598–604
transantral, 593–596
transconjunctival, 587–593
transcutaneous, 574–587
surgical ophthalmologic examination, 557–572
allergies, 559
dilated fundus examination, 568–571
family history, 560
history of present illness, 558
intraocular pressure, 565
medications, 560
motility and diplopia, 565–567
past medical history, 559
past ocular history, 559
physical examination, 560–562
pupils, 563–565
slit-lamp examination, 567–568
vision, 562–563
visual field testing, 567
trauma to, 629–648
clinical findings, 630–631
determining which fractures require treatment, 631–634
Orbit (continued)

diagnosis of, 630
examination of, 630
imaging, 631
internal orbital reconstruction, 637–646
mechanisms of injuries, 629–630
medical management of internal orbital fractures, 636–637
timing of treatment, 634–636
types of injuries, 629

Osseointegration, craniofacial, advances in, 698
Osseous anatomy, in orbital growth and development, 545
on CT and CBCT imaging, 539–540
Osteology, of the orbit, 526

P

Palatine bone, anatomy of orbital plate of, 651
Periorbita, anatomy of, 531
Physical examination, in surgical ophthalmologic examination, 560–562
Polydioxanone plates, orbital reconstruction with, 622–623
Polyglactin, orbital reconstruction with, 622
Polylactide, orbital reconstruction with, 621–622
Prosthetic reconstruction, of the orbit/globe, 697–712
advantages of, 700
anophthalmic socket, 707
definitions of terms, 698–700
dermis fat graft, 708
disadvantages of, 700–701
enucleation, 707–708
evisceration, 707
fabrication of ocular prosthesis, 708–709
fabrication of orbital prosthesis, 704–706
history of, 697–698
home care of orbital prosthesis, 706–707
implant placement procedure, 703–704
in radiated patients and hyperbaric oxygen therapy, 711
maintenance of ocular prosthesis, 709
ocular implants, 708
orbital exenteration, 700
performance of, 701
partial facial transplant versus prosthesis, 709–711
postoperative care of ocular prosthesis, 709
role of CT and stereolithographic model in planning, 702–703
soft tissue preparation, 701–702
debulking previous reconstructive flaps, 701–702
ipsilateral balancing brow lift, 702
Pupils, in surgical ophthalmologic examination, 563–565

R

Radiation therapy, hyperbaric oxygen therapy in irradiated patients undergoing prosthetic reconstruction of orbit, 711
Reconstruction, internal orbital, 640–644
biomaterials for, 609–627
allogeneic materials, 616–617
alloplastic materials, 616
alloplasts, 617
autogenous materials, 613–616
characteristics of, 609–611
considerations for internal orbit, 611–613
nonresorbable materials, 617–621
resorbable alloplasts, 621–623
selection of, 613
intraoperative considerations, 637
postoperative considerations, 644–646
late correction of orbital fractures, 649–663
diagnosis, 651–652
imaging techniques, 652–653
indications for surgery, 653–654
diplopia, 653
enophthalmos, 653–654
lack of ocular motility, 653
materials for reconstruction, 655–658
allogeneic materials, 657
alloplastic materials, 658
autogenous materials, 655–657
orbital anatomy, 650–651
secondary reconstruction, 654–655
complications, 660–663
timing of surgery, 654

navigation-assisted surgical approaches to orbital, 598–604
prosthetic, of the orbit/globe, 697–712
advantages of, 700
anophthalmic socket, 707
definitions of terms, 698–700
dermis fat graft, 708
disadvantages of, 700–701
enucleation, 707–708
evisceration, 707
fabrication of ocular prosthesis, 708–709
fabrication of orbital prosthesis, 704–706
history of, 697–698
home care of orbital prosthesis, 706–707
implant placement procedure, 703–704
in radiated patients and hyperbaric oxygen therapy, 711
maintenance of ocular prosthesis, 709
ocular implants, 708
orbital exenteration, 700
performance of, 701
partial facial transplant versus prosthesis, 709–711
postoperative care of ocular prosthesis, 709
role of CT and stereolithographic model in planning, 702–703
soft tissue preparation, 701–702
debulking previous reconstructive flaps, 701–702
ipsilateral balancing brow lift, 702
Index

718
postoperative care of ocular prosthesis, 709
role of CT and stereolithographic model in planning, 702–703
soft tissue preparation, 701–702
debulking previous reconstructive flaps, 701–702
ipsilateral balancing brow lift, 702
Rectus muscles, anatomy of, 533
Rejuvenation. See Aesthetic surgery.
Resurfacing, laser skin, 691–693
Silicones, orbital reconstruction with, 621
Skin resurfacing, laser, 691–693
Slit-lamp examination, in surgical ophthalmoscopic examination, 567–568
Stereolithographic model, role in planning for prosthetic reconstruction of orbit/globe, 702–703
Subciliary approach, for rejuvenation of lower eyelid, 684
Subdermal fillers, role in periorbital rejuvenation, 690–691
Surgery, internal orbital reconstruction, biomaterials for, 609–627
late correction of orbital fractures, 649–663
diagnosis, 651–652
imaging techniques, 652–653
indications for surgery, 653–654
diplopia, 653
enophthalmos, 653–654
lack of ocular motility, 653
materials for reconstruction, 655–658
allogeneic materials, 657
alloplastic materials, 658
autogenous materials, 655–657
orbital anatomy, 650–651
secondary reconstruction, 654–655
complications, 660–663
of internal orbit, 658–660
timing of surgery, 654
traditional and contemporary approaches to the orbit, 573–607
clinical outcomes and complications, 596–598
navigation-assisted, 598–604
treatment/reconstructive goals, 598–600
work flow process for computer-aided, 600–604
transantral, 593–596
endoscopic-assisted, 593–596
transconjunctival, 587–593
combinations of approaches, 592–593
preseptal technique, 589
retroseptal (fornix) technique, 588–589
transcaruncular approach, 590–592
with lateral canthotomy, 589–590
transcutaneous, 574–587
access to inferior, medial, and lateral orbit, 574–578
access to superior orbit, 578–579
anatomy of, 579–583
approaching the zygomatic arch, 583–586
orbital exenteration, 586–587
Surgical anatomy. See Anatomy.
Surgical ophthalmologic examination. See Ophthalmologic examination.
Swelling, periorbital, with internal orbital fractures, 636
T
Tarsal plates, anatomy of, 529–530
Teflon, orbital reconstruction with, 621
Titanium, in reconstruction of orbital fractures, 658
Trauma, ocular, surgical ophthalmologic examination in, 557–572
allergies, 559
dilated fundus examination, 568–571
family history, 560
history of present illness, 558
intraocular pressure, 565
medications, 560
motility and diplopia, 565–567
past medical history, 559
past ocular history, 559
physical examination, 560–562
pupils, 563–565
slit-lamp examination, 567–568
vision, 562–563
visual field testing, 567
orbital, 629–648
clinical findings, 630–631
determining which fractures require treatment, 631–634
absolute indications, 633–634
relative contraindications, 634
relative indications, 634
diagnosis of, 630
examination of, 630
imaging, 631
internal orbital dissection, 637–640
medial wall, 639–640
orbital floor, 637–639
internal orbital reconstruction, 640–644
mechanisms of injuries, 629–630
medical management of internal orbital fractures, 636–637
Trauma (continued)
  antibiotics, 636
  anticholinergics, 637
  blood pressure, 637
  globe protection, 637
  periorbital swelling, 636
  retraction, 637
  sinus precautions, 636
postoperative considerations, 644–646
  antibiotics, 645
  eye examinations, 645
  nasal decongestants, 645
  positioning, 645
  prevention of barotrauma, 645–646
  sinus precautions, 645
  steroids, 645
timing of treatment, 634–636
  immediate repair, 634–636
  observation with possibility of later repair, 636
  repair within 2 weeks, 636
  types of injuries, 629
orbital, surgical approaches to, 573–607

U
Upper eyelid, effects of aging on, 673
  examination of, 667

rejuvenation surgery, 677–682
  Asian eyelid surgery, 678, 680–682
  postoperative care and complications, 682
  revision upper blepharoplasty, 678
  upper blepharoplasty, 677–678

V
  Venous drainage, of the orbit, 534–536
  Ventilation management, during internal orbital reconstruction, 637
  Vision acuity, in surgical ophthalmologic examination, 562–563
  Visual field testing, confrontational fields in, 567
  Volume assessment, of orbits, 542

W
  Whitnall’s ligament, 531
  Whitnall’s tubercle, 527

Z
  Zygomatic arch, transcutaneous surgical approach to, 583–586
