A
Advancement flaps, basic design, 280–285
Alopecia, with temporoparietal fascial flap, 368
Anatomy, for cervicofacial flaps, 391–392
  cheek, 391
  superficial musculoaponeurotic system, 391
for lip reconstruction, 335–336
for palatal flaps, 305–306
for pectoralis major myocutaneous flap, 422–423
for pedicled latissimus dorsi myocutaneous, 428–429
for platysma myocutaneous flap, 382–383
for submental island flap, 372
for supraclavicular artery island flaps, 412
for temporis muscle flap and temporoparietal fascial flap, 359–360
for tongue flaps, 314–315
for trapezius myocutaneous flaps, 416
Anesthesia, for tongue flaps, 317–318
Augmentation surgery, midfacial, with temporalis muscle flap technique, 363
for cervicofacial flaps, 389–400
  complications, 396, 398
  with cervicofacial flaps, 396–398
  with flaps in reconstructive surgery, 301–302
  palatal flaps, 310
  with pedicled latissimus dorsi myocutaneous, 433
  with submental island flap, 378
  with temporalis muscle flap, 364–365
  with temporoparietal fascial flap, 367–368
  with tongue flaps, 322–323

B
Brow defects, cervicofacial flap in reconstruction of, 389–400

C
Cervicofacial flaps, in maxillofacial reconstruction, 389–400
  anatomy, 391–392
  complications, 396, 398
  contraindications, 390
  discussion, 398–399
  indications, 390
  modifications, 394–396
    dissection in facial portion of flap, 394
    for temporofrontal defects, 395–396
    increased arc of rotation, 394
    orbital exenteration, 396
    reverse flap, 394–395
    postoperative care, 396
    preoperative planning, 392
    procedure, 392–394
Cheek, anatomy of, for cervicofacial flaps, 391
Cheek defects, cervicofacial flap in reconstruction of, 389–400
Complications, supraclavicular artery island flap, 414–415
  with cervicofacial flaps, 396–398
  with flaps in reconstructive surgery, 301–302
  palatal flaps, 310
  with pedicled latissimus dorsi myocutaneous, 433
  with submental island flap, 378
  with temporalis muscle flap, 364–365
  with temporoparietal fascial flap, 367–368
  with tongue flaps, 322–323

D
Dorsal tongue flap, 318–319
Double-door tongue flap, 320–321

E
Endoscopically assisted flap harvesting, for temporoparietal fascial flap, 367

F
Facial artery musculomucosal flaps, 327–333
  complications, 332
  current controversies, 332
  indications and contraindications, 330
  surgical procedure, 330–332
Facial reanimation surgery, with temporalis muscle flap technique, 363
Flaps, of head and neck, local and regional, 277–434
  basic design, 277–303
    advancement, 280–285
    complications, 301–303
    history, 277
    interpolated, 295–301
    local, 280–301
    nomenclature, 279–280
    physiologic characteristics of skin, 277–278
    preoperative considerations, 278–279
    rotation, 285–289
    transposition, 289–295
  cervicofacial, 389–400
    anatomy, 391–392
    complications, 396, 398
    contraindications, 390
Index

Flaps (continued)
discussion, 398–399
indications, 390
modifications, 394–396
postoperative care, 396
preoperative planning, 392
procedure, 392–394
facial artery musculomucosal, 327–333
complications, 332
current controversies, 332
indications and contraindications, 330
surgical procedure, 330–332
lip, 335–357
anatomic considerations, 336–337
functional and esthetic considerations, 338–339
general considerations, 338
history, 335–336
pathology and epidemiology, 337–328
reconstructive strategies, 339–354
nasolabial, 327–333
complications, 330
current controversies and future considerations, 330
indications and contraindications, 328
surgical procedure, 328–330
palatal, 305–311
anatomy, 305–306
complications, 310
indications and contraindications, 306
technique, 306–310
paramedian forehead, 401–410
additional considerations, 407
clinical results in the literature, 408
indications and contraindications, 802
possible complications, 407
postoperative care, 406–407
technique, 402–406
pectoralis major myocutaneous, 421–426
discussion, 424–425
preoperative considerations, 422
surgical anatomy, 422–423
surgical technique, 423–424
pedicled latissimus dorsi myocutaneous, 427–434
complications, 433
neurovascular anatomy, 429
postoperative management, 432–433
preoperative considerations, 427–428
regional anatomy, 428–429
success rate with, 433–434
surgical development of, 429–430
surgical procedure, 430–432
platysma myocutaneous, 381–387
anatomy, 382–383
discussion, 385–386
posteriorly based, 383–384
superiorly based, 384–385
surgical principles, 386
submental island, 371–379
anatomy, 372
complications, 378
contraindications, 372–373
flap specifications, 371–372
postoperative care, 377–378
preoperative considerations, 373
technique, 373–377
uses of, 372
supraclavicular artery island, 411–420
anatomy, 412
case example, 414
complications, 414–415
discussion, 415
history, 412
imaging, 412
indications, 412
technique, 413–414
temporalis muscle and temporoparietal fascial, 359–369
anatomy, 359–360
indications and contraindications, 360–361
preoperative assessment, 361
techniques, 361–368
tongue, 313–325
alternatives, 317
anesthetic implications, 317–318
applied surgical anatomy, 314–315
complications, 322–323
contraindications, 316–317
dorsal, 318–319
double- and single-door, 320–321
history, 313
indications, 315–316
lateral, 321
median transit, 322
sliding and island, 321–322
ventral, 319–320
trapezius myocutaneous, 411–420
anatomy, 416
case example, 418
discussion, 418
history, 415–416
imaging, 417
technique, 417–418
Forehead flap. See Paramedian forehead flap.

H
History, of flaps in reconstructive surgery, 277
lip reconstruction, 335–336
supraclavicular artery island flap, 336
trapezius myocutaneous flap, 413–414
Index

I
Imaging, for trapezius myocutaneous flaps, 417
supraclavicular artery island flap, 412–413
Interpolated flaps, basic design, 296–301
Intraoral defects, nasolabial and facial artery
musculomucosal flaps for, 327–333
Island flap, palatal, 309–310
submental, 371–379
supraclavicular artery, 411–420
tongue, 321–322

L
Lateral tongue flap, 321
Latissimus dorsi myocutaneous, pedicled, 427–434
complications, 433
neurovascular anatomy, 429
postoperative management, 432–433
preoperative considerations, 427–428
regional anatomy, 428–429
success rate with, 433–434
surgical development of, 429–430
surgical procedure, 430–432
Lip reconstruction, 335–357
anatomic considerations, 336–337
functional and esthetic considerations, 338–339
general considerations, 338
history, 335–336
pathology and epidemiology, 337–328
reconstructive strategies, 339–354
full-thickness defect, 344–354
large, 352–354
medium, 346–352
small, primary closure for, 344–346
partial-thickness defect, 342–344
island advancement flap, 343–344
primary closure, 342–343
vermillion defects, 339–342
healing by second intention, 339
mucosal advancement flap, 340–341
mucosal cross lip flap, 341–342
mucosal V-Y advancement, 340
primary closure, 339–340
Local flaps, basic design, 280–301
advancement, 280–285
interpolated, 296–301
rotation, 285–289
transposition, 289–295

M
Maxillofacial reconstruction, use of cervicofacial flap
in, 389–400
with nasolabial and facial artery musculomucosal
flaps, 327–333
Median transit tongue flap, 322
Midface reconstruction, with paramedian forehead
flaps, 401–410
Midfacial augmentation, with temporals muscle flap
 technique, 363–364

N
Nasal reconstruction, with paramedian forehead
flaps, 401–410
Nasolabial flaps, 327–333
complications, 330
current controversies and future considerations,
330
indications and contraindications, 328
surgical procedure, 328–330
Necrosis, flap, 365, 367–368
Nerve injury, facial, with temporalis muscle flap
 technique, 365
Nomenclature, in reconstructive surgery with flaps,
279–280

O
Oral cavity reconstruction, with platysma
myocutaneous flap, 381–387
with temporals muscle flap technique, 361–363
with temporoparietal fascial flap technique,
366–367
Orbital exenteration, cervicofacial flap in
reconstruction of, 396
Orbital maxillary reconstruction, with temporoparietal
fascial flap technique, 366

P
Palatal flaps, 305–311
anatomy, 305–306
complications, 310
indications and contraindications, 306
 technique, 306–310
modifications, 307–310
for skull-based defects, 308–310
random rotation-advancement flap, 307–308
submucosal, 308
Paramedian forehead flaps, 401–410
additional considerations, 407
clinical results in the literature, 408
indications and contraindications, 802
possible complications, 407
postoperative care, 406–407
 technique, 402–406
anatomic considerations, 403–404
preoperative planning, 402–403
surgical procedure, 404–406
Index

Pectoralis major myocutaneous flap, 421–426
  discussion, 424–425
  preoperative considerations, 422
  surgical anatomy, 422–423
  surgical technique, 423–424
Pedicled flaps, latissimus dorsi myocutaneous, 427–434
  pectoralis major myocutaneous flap, 421–426
  supraclavicular artery island flap, 411–420
  trapezius myocutaneous flaps, 411–420
Platysma myocutaneous flap, 381–387
  anatomy, 382–383
  discussion, 385–386
  posteriorly based, 383–384
  superiorly based, 384–385
  surgical principles, 386
Postoperative care, with paramedian forehead flaps, 406–407
Preoperative considerations, in reconstructive surgery using flaps, 278–279
with pedicled latissimus dorsi myocutaneous, 427–428
with submental island flap, 373
Reanimation surgery, facial, with temporalis muscle flap technique, 363
Reconstruction, of head and neck with regional and local flaps. See Flaps.
Rotation flaps, basic design, 285–289
Rotation-advancement flap, palatal, 307–308
Skin, physiologic characteristics, 277–278
Skull-based defects, palatal flaps for, 308–310
Sliding tongue flap, 321–322
Submucosal modification, of palatal flap, 308
Tongue flaps, 313–325
  alternatives, 317
  anesthetic implications, 317–318
  applied surgical anatomy, 314–315
  complications, 322–323
  contraindications, 316–317
  history, 313
  indications, 315–316
  surgical procedures, 318–322
  dorsal, 318–319
  double- and single-door, 320–321
  lateral, 321
  median transit, 322

T
Temporalis muscle flap, 359–369
  anatomy, 359–360
  complications, 364–365
    facial nerve injury, 365
    flap necrosis, 365
    restricted mouth opening, 365
    temporal hollowing, 365
  indications and contraindications, 360–361
  preoperative assessment, 361
  technique, 361–364
    composite flap, 364
    facial reanimation surgery, 363
    midfacial augmentation, 363–364
    oral reconstruction, 361–363
Temporofrontal defects, cervicofacial flap in reconstruction of, 395–396
Temporoparietal fascial flap, 359–369
  additional considerations, 367
  composite flap, 367
  endoscopically assisted flap harvesting, 367
  extending pedicle length, 367
  anatomy, 359–360
  complications, 367–368
    alopecia, 368
    flap necrosis, 367
  indications and contraindications, 360–361
  postoperative management, 368
  preoperative assessment, 361
  technique, 365–367
    auricular reconstruction, 366
    oral cavity reconstruction, 366–367
    orbitomaxillary reconstruction, 366

S
Single-door tongue flap, 320–321
Superficial musculoaponeurotic system, anatomy of, for cervicofacial flaps, 391
Supraclavicular artery island flaps, 411–420
  anatomy, 412
  case example, 414
  complications, 414–415
  discussion, 415
  history, 412
  imaging, 412
  indications, 412
  technique, 413–414
sliding and island, 321–322
ventral, 319–320
Transposition flaps, basic design, 289–295
Trapezius myocutaneous flaps, 411–420
anatomy, 416
case example, 418
discussion, 418
history, 415–416
imaging, 417
technique, 417–418

V
Ventral tongue flap, 319–320
Vermillion defects, reconstructive strategies for, 339–342
