Aesthetic adjuncts, with orthognathic surgery, 573–585
  adjunctive lip surgery, 579–582
  anatomy, 576–577
  facial augmentation or recontouring, 579–584
  initial evaluation, 575–576
  placement of injectables, 582–584
  cervicoplasty, platysmaplexy, and rhytidectomy, 582–583
  iatrogenic deformities created as result of, 583–584
  sequence for closed submental liposuction, 583
  tear trough, 582
  rhinoplasty, 577–579
  timing of procedures, 573–575
  treatment planning, 577
  types of procedures, 573–575
Anchorage devices, temporary, 507–509, 539–550
  in mandibular surgery, 507–509
  skeletal, and surgically assisted osteogenic orthodontics, 539–550
Anesthesia, for office-based orthognathic surgery, 615–618
Anterior open bite closure, 526–528
  differential impacton, 526
  multipiece LeFort osteotomies, 526–528
Arch length incompatibility, and maxillary protrusion, 533–534
Autonomy, patient, with office-based orthognathic surgery, 618–619
Bone grafting, at time of maxillary surgery, 531–533
Cleft lip and palate, cleft orthognathic surgery and management of, 565–572
  brief history of, 565
  classification, 567
  embryology, 566
  general approaches to, 570–571
  epidemiology, 570
  phases of treatment, 570–571
  velopharyngeal insufficiency considerations, 571
  incidence, genetics and cause, 566
  the cleft and craniofacial team, 567
  timeline of surgical treatment, 567–570
Complications, in orthognathic surgery, 599–609
  from preoperative planning errors, 599–600
  iatrogenic deformities created as result of, 583–584
  bony notching, 583
  facial asymmetry, 583
  motion abnormalities, 583
  intraoperative, 600–605
  hemorrhage, 600–601
  neurosensory disturbance, 601–602
  oro-antral communication, 604–605
  unfavorable split of sagittal ramus osteotomies, 602–604
  postoperative, 605–609
  endodontic therapy, 606
  fixation failure, 608–609
  infection, 605
  malocclusion, 607–608
  nasal abnormalities, 607
  TMJ dysfunction, 608
  vascular compromise, 605–606
  accuracy/outcomes, 470–472
  data collection and presurgical workup, 460–464
  intraoperative efficiency, 467–470
  procedures, 464–467
Computer-assisted planning, and splint fabrication for maxillary orthognathic surgery, 534–537
Computer-assisted surgery, navigation for orthognathic surgery, 587–598
  applications of, 591–596
  augmenting surgeon’s visualization of surgical field, 594–596
  avoiding critical structures, 593–594
  combination, 594
  transfer surgical plan to patient, 591–592
  verifying surgical outcome matches surgical plan, 592–593
  basics of, 588–589
  drawbacks of, 596–597
  registration, 589–591
Condylar resorption, progressive/idiopathic, surgical considerations in TMJ patients with, 555–557
Costs, for office-based orthognathic surgery, 615
Index

Cutting guides and templates, virtual surgical planning in orthognathic surgery, 459–473

D
Deformities, iatrogenic. See Iatrogenic deformities and Complications.
Distraction osteogenesis, in mandibular surgery, 487–521

E
Endodontic therapy, after orthognathic surgery, 606–607

F
Facial augmentation and recontouring, 579–584
placement of injectables, 582–584
solid implant materials, 580–582
Fillers. See Implant materials.
Fixation failure, after orthognathic surgery, 608–609

G
Genioplasty, 507

H
Hemorrhage, during orthognathic surgery, 600–601
Hospitalization, charges for orthognathic surgery, 613

I
Iatrogenic deformities, created as result of orthognathic surgery, 583–584
bony notching, 583
facial asymmetry, 583
motion abnormalities, 583
Implant materials, solid, for facial augmentation or recontouring, 580–582
Infection, after orthognathic surgery, 605
Insurance, coverage for orthognathic surgery, 611–613

L
LeFort ostetomy, multipiece, for anterior open bite closure, 526–528
segmental, 525–526
Lip adjunctive surgery, with orthognathic surgery, 579
excess gingival display, 579
long lip/inadequate incisal display, 579
Liposuction, sequence for closed submental, 583
M
Malocclusion, after orthognathic surgery, 607–608
surgical considerations in TMJ patients with, 555–557
Mandibular advancement, surgical, in orthodontic preparation for orthognathic surgery, 443–448
for class II high or normal mandibular plane angle, 443–445
for class II low mandibular plane angle, 445–448
Mandibular setback, surgical, in orthodontic preparation for orthognathic surgery, 448–450
Mandibular surgery, orthognathic, 487–521
altering posterior aspect of distal segment in sagittal split osteotomy, 496–507
correcting vertical asymmetry at mandibular body, 507
genioplasty, 507
history of, 488
technologic and technical improvements, 488–496
temporary anchorage devices, 507–509
virtual surgical planning, 509–513
Maxillary advancement, surgical, in orthodontic preparation for orthognathic surgery, 448–450
Maxillary excess, vertical, treated with surgical maxillary impaction, 450–452
Maxillary surgery, orthognathic, 523–537
anterior open bite closure, 526–528
differential impacton, 526
multipiece LeFort osteotomies, 526–528
bone grafting at time of, 531–533
computer-assisted planning and splint fabrication, 534–537
segmental, 523–526
LeFort osteotomy, 525–526
surgically assisted rapid palatal expansion, 523–525
treating arch length incompatibility and protrusion, 533–534
treating vertical excess, 528–531
Maxillary transverse deficiency, treated with surgical expansion, 452–453

N
Nasal abnormalities, after orthognathic surgery, 607
Navigation, for orthognathic surgery, 587–598
applications of, 591–596
augmenting surgeon’s visualization of surgical field, 594–596
avoiding critical structures, 593–594
combination, 594
transfer surgical plan to patient, 591–592
verifying surgical outcome matches surgical plan, 592–593
basics of, 588–589
drawbacks of, 596–597
registration, 589–591
Neurosensory disturbances, during orthognathic surgery, 601–602

O
Office-based outpatient surgery, orthognathic, 611–620
anesthesia, 615–618
autonomy, 619–620
costs, 615
health care landscape, 611
hospitalization charges, 613
insurance, 611–613
office operating suite, 614–615
outpatient surgery, 614
recovery, 618–619
Operating suite, for office-based orthognathic surgery, 614
Oro-antral communication, during orthognathic surgery, 604–605
Orthodontic treatment, in preparation for orthognathic surgery, 441–458
common pitfalls in preparing surgical setups, 453–455
presurgical goals, 441–442
alignment of arches, 442
coordinate arches, 442
decompensation of dentition, 441–442
full closure of all spaces, 442
leveling of arches, 442
perfect occlusion of surgical models, 442
technique/procedure, 443–453
for class III with surgical maxillary advancement and/or mandibular setback, 445–450
for high or normal mandibular plane angle treated with surgical mandibular advancement, 443–445
for low mandibular plane angle treated with mandibular surgical advancement, 445–448
maxillary transverse deficiency treated with surgical expansion, 452–453
vertical maxillary excess treated with surgical maxillary impaction, 450–452
three concepts and a corollary for, 442–443
treatment simulation, 455–457
surgically assisted osteogenic, 539–550
case presentations, 545–550
historical perspectives, 540–541
surgical techniques and materials, 541–545
Orthognathic surgery, 441–620
aesthetic adjuncts with, 573–585
adjunctive lip surgery, 579–582
anatomy, 576–577
initial evaluation, 575–576
placement of injectables, 582–584
cervicoplasty, platysmaplasty, and rhytidectomy, 582–583
iatrogenic deformities created as result of, 583–584
sequence for closed submental liposuction, 583
tear trough, 582
rhinoplasty, 577–579
timing of procedures, 573–575
treatment planning, 577
types of procedures, 573–575
cleft lip and palate management, 565–572
brief history of, 565
classification, 567
embryology, 566
general approaches to, 570–571
epidemiology, 570
phases of treatment, 570–571
velopharyngeal insufficiency considerations, 571
incidence, genetics and cause, 566
the cleft and craniofacial team, 567
timeline of surgical treatment, 567–570
complications in, 599–609
from preoperative planning errors, 599–600
intraoperative, 600–605
hemorrhage, 600–601
neurosensory disturbance, 601–602
oro-antral communication, 604–605
unfavorable split of sagittal ramus osteotomies, 602–604
postoperative, 605–609
endodontic therapy, 606
fixation failure, 608–609
infection, 605
malocclusion, 607–608
nasal abnormalities, 607
TMJ dysfunction, 608
vascular compromise, 605–606
in patients with temporomandibular joint disorders, 551–564
combined with alloplastic TMJ reconstruction, 557–558
history, 552
laboratory evaluation, 552–554
physical examination, 552
radiologic examination, 552
surgical considerations, 555–557
for class II malocclusion with condylar resorption, 555–557
for class III malocclusion, 555
virtual surgical planning, 558–562
in the office setting, 611–620
anesthesia, 615–618
