Alveolar ridge defects, bone augmentation for, 203–226, 227–244
complex, 227–244
bone grafting materials, 230–232
continuity defects, 238–242
distraction osteogenesis, 235–237
evaluation, 230
evidence, 227–230
guided bone regeneration, 237
Le Fort I with bone graft, 238
maxillary sinus elevation and grafting, 237–238
onlay block grafting, 232–235
osteoperiosteal flap split ridge procedure, 237

Bone grafting materials, 205
cortical versus particulate (cancellous) bone, 205–206
demineralized versus mineralized, 206
direct particulate onlay grafting, 212
distraction osteogenesis, 221–222
graft fixation, 206
graft loading, 206–207
grafting nomenclature, 204–205
guided barrier regeneration, 222
inferior alveolar nerve transposition, 220–221
interpositional bone grafting, 220
lateral ramus graft, 217–219
onlay grafting, 211–212
osteoinductive agents, 222
postoperative care, 222
preoperative planning, 207
ridge split technique, 219–220
socket preservation grafting, 207–211
subperiosteal tumor grafting, 212
symphysis (chin) graft, 212–217
tuberosity graft, 219

Autogenous bone grafting, recipient site complications, 315–316

Biomechanics, of implant attachment in edentulous patients, 267–268
Bone, as an immune and endocrine organ, 176
Bone augmentation, for alveolar ridge defects, 203–226, 227–244
complex, 227–244
bone grafting materials, 230–232
continuity defects, 238–242
distraction osteogenesis, 235–237
evaluation, 230
evidence, 227–230
guided bone regeneration, 237
Le Fort I with bone graft, 238
maxillary sinus elevation and grafting, 237–238
onlay block grafting, 232–235
osteoperiosteal flap split ridge procedure, 237

Bone grafting materials, 205
cortical versus particulate (cancellous) bone, 205–206
demineralized versus mineralized, 206
direct particulate onlay grafting, 212
distraction osteogenesis, 221–222
graft fixation, 206
graft loading, 206–207
grafting nomenclature, 204–205
guided barrier regeneration, 222
inferior alveolar nerve transposition, 220–221
interpositional bone grafting, 220
lateral ramus graft, 217–219
onlay grafting, 211–212
osteoinductive agents, 222
postoperative care, 222
preoperative planning, 207
ridge split technique, 219–220
socket preservation grafting, 207–211
subperiosteal tumor grafting, 212
symphysis (chin) graft, 212–217
tuberosity graft, 219

Augmentation. See Bone augmentation.
Autogenous bone grafting, recipient site complications, 315–316

Biologically driven reconstruction, post-cancer, 258–259

Augmentation. See Bone augmentation.
Autogenous bone grafting, recipient site complications, 315–316
Bone (continued)
history of, 245
postoperative care, 252
surgical procedures, 251–252
treatment planning, 247–248
vertical, in esthetic implant site development, 298–302
Bone cells, 176
Bone loss, marginal, role in osseointegration, 179

C
Cancer, prosthodontic considerations in post-cancer reconstructions, 255–263
maxillary obturators, 255–256
reconstructed jaws, 256–262
biologically driven, 258–259
peri-implant tissue hypertrophy, 261
prosthodontic driven, 260–261
Complications, surgical, in dental implantology, 313–318
hard tissue, 315–317
of recipient site in autogenous bone grafting, 315–316
peri-implantitis, 316–317
soft tissue, 313–315
in flapless surgery, 315
mandibular nerve injury, 313–314
sinus/nasal floor perforation, 314–315
Computed tomography. See Cone beam computed tomography.
Cone beam computed tomography (CBCT), in dental implant treatment planning and guided surgery, 319–340
scanning and diagnosis for dental implants, 185–202
Continuity defects, in alveolar ridge augmentation, 238–242

D
Dental implants, 175–340
biological basis of, current concepts for, 175–183
immune system and tissue integration, 178–180
complement system, 178
lymphocytes, 179
macrophages, 178–179
marginal bone loss, 179
soft tissues and foreign body equilibrium, 179–180
osseointegration dynamics, 180
tissue characteristics, 176–178
bone as immune and endocrine organ, 176
bone cells, 176

E
Edentulous patients, treatment of, 265–272
bar-supported overdenture, 271
biomechanics of implant attachment, 267–269
studs versus bar, 268–269
implant rationale, 266–267
adopting the McGill consensus statement, 267
scientific support, 267
two-implant-supported overdenture, 269–271
Esthetic implant site development. See Implant site development, esthetic.
Extraction, dental, and immediate placement of dental implants, 273–282
F

Flapless surgery, complications of, in dental implantology, 315
Foreign body equilibrium, soft tissues and, role in osseointegration, 179–180
Function, immediate, after immediate placement of dental implants after dental extraction, 273–282

G

Grafting. See also Bone augmentation.
materials for, 230–232
nomenclature for, 204–205
Guided barrier regeneration, in alveolar ridge augmentation, 223
Guided bone regeneration, in alveolar ridge augmentation, 237
Guided surgery, digital technologies for, 319–340

H

Hard tissue complications, surgical, in dental implantology, 315–317
of recipient site in autogenous bone grafting, 315–316
peri-implantitis, 316–317
Horizontal augmentation, in esthetic implant site development, 291–298
Hypertrophy, of peri-implant tissue, in post-cancer reconstruction, 261

I

Immediate placement, of dental implants after dental extraction, 273–282
Immune system, and tissue integration in dental implants, 178–180
complement system, 178
lymphocytes, 179
macrophages, 178–179
marginal bone loss, 179
soft tissues and foreign body equilibrium, 179–180
Implant site development, esthetic, 283–311
comprehensive esthetic evaluation, 283–289
clinical examination, 284–288
Palacci and Ericsson alveolar ridge classification system, 288
patient expectations, 283–284
radiographic examination, 284
the esthetic smile, 284
treatment planning, 289–305
defect configuration, 289–291
for horizontal defects, 291–298
for vertical defects, 298–302
implant position and angulation, 303–305
preservation of hard and soft tissues, 289
soft tissue management, 302–303

Implants. See Dental implants.
Inferior alveolar nerve transposition, 220–221
Integration, tissue. See Osseointegration.
Interpositional bone grafting, alveolar ridge augmentation with, 220

L

Lateral ramus graft, alveolar ridge augmentation with, 217–219
Le Fort I, with bone graft in alveolar ridge augmentation, 238
Lymphocytes, role in osseointegration, 179

M

Macrophages, role in osseointegration, 178–179
Mandibular nerve injury, in dental implantology, 313–314
Maxillary obturators, in post-cancer reconstructions, 255–256
Maxillary sinus, bone augmentation, 245–253
anatomy and physiology, 245
complications, 250–251
diagnosis, 246–247
grafting techniques, 248–250
history of, 245
postoperative care, 252
surgical procedures, 251–252
treatment planning, 247–248
Maxillary sinus elevation, and grafting in alveolar ridge augmentation, 237–238
McGill Consensus Statement, in treatment of edentulous patients, 267

N

Nasal floor perforation, surgical, in dental implantology, 314–315

O

Oncologic surgery, prosthodontic considerations in post-cancer reconstructions, 255–263
maxillary obturators, 255–256
reconstructed jaws, 256–262
biologically driven, 258–259
peri-implant tissue hypertrophy, 261
prosthodontic-driven, 260–261
Onlay grafting, alveolar ridge augmentation with, 211–212, 232–235
Osseointegration, biological basis of, 176–178
bone as immune and endocrine organ, 176
bone cells, 176
cellular and molecular basis of, 176–178
Osseointegration (continued)
dynamics of, 180–181
Osteoblasts, 176
Osteoclasts, 176
Osteoinductive agents, in alveolar ridge augmentation, 222
Osteoperiosteal flap split ridge procedure, in alveolar ridge augmentation, 237
Overdentures, in treatment of edentulous patients, 265–272
   bar-supported, 271
   biomechanics of implant attachment, 267–269
   studs versus bar, 268–269
   implant rationale, 266–267
   adopting the McGill consensus statement, 267
   scientific support, 267
   two-implant-supported, 269–271

P
Peri-implant tissue hypertrophy, in post-cancer reconstruction, 261
Peri-implantitis, 316–317
Prosthodontic driven reconstruction, post-cancer, 260–261

R
Ridge split technique, alveolar ridge augmentation with, 219–220

S
Sinus perforation, surgical, in dental implantology, 314–315
Socket preserving grafting, 207–211
   alveolar ridge augmentation with, 207–211
Soft tissue augmentation, in esthetic implant site development, 302–303
Soft tissue complications, surgical, in dental implantology, 313–315
   in flapless surgery, 315
   mandibular nerve injury, 313–314
   sinus/nasal floor perforation, 314–315
Soft tissues, foreign body equilibrium and, 179–180
Subperiosteal tunnel grafting, alveolar ridge augmentation with, 212
Surgical procedures. See also Bone augmentation, complications in dental implantology, 313–318
   hard tissue, 315–317
   of recipient site in autogenous bone grafting, 315–316
   peri-implant, 316–317
   soft tissue, 313–315
   in flapless surgery, 315
   mandibular nerve injury, 313–314
   sinus/nasal floor perforation, 314–315
digital technologies for guided dental implant surgery, 319–340
   use of cone beam computed tomography (CBCT) in, 185–202
Symphysis graft, alveolar ridge augmentation with, 212–217

T
Tissue characteristics, in biological basis of osseointegration, 176–178
   bone as immune and endocrine organ, 176
   bone cells, 176
   cellular and molecular basis of osseointegration, 176–178
Tuberosity graft, alveolar ridge augmentation with, 219

V
Vertical augmentation, in esthetic implant site development, 298–302
