Index

Note: Page numbers of article titles are in boldface type.

A
A Smile for a Child Foundation, 221–223
distribution of funds, 222–223
fundraising, 222
infrastructure, 222
initial founding, 221–222
longevity of, 223
Alar base reduction, in cleft lip and palate patients, 196–198
Anatomy, for feeding and swallowing, 154–155
in infants with cleft lip and palate, 154–155
in normal infants, 154
Audiologic assessment, in cleft lip and plate patients, 177–179

B
Bottles, modified, for feeding infants with cleft lip and palate, 156–157
Breastfeeding, with infants with cleft lip and palate, 155–156

C
Cartilage, lower lateral, surgery in cleft lip and palate patients, 194–195
rib, for rhinoplasty in cleft lip and palate patients, 198–201
Cleft lip and palate, 195–228
feeding infants with, and postoperative management, 153–159
infant feeding and swallowing, 153–157
feeding challenges, 154–155
feeding modifications, 155–157
normal anatomy and physiology, 154
postoperative feeding, 157
postoperative wound care, 157–158
management of, on international missions, 203–220
academic and ambassadorial exchange, 213
advance planning and contact, 205–206
ambassadorial service, 203
extra considerations, 209–211
operating room instrumentation turnover facilitation, 209–210
water health, 210–211
financial alchemy, 216–218
patient and clinic logistics, 211–213
patient record/photograph use consent document, 219
preplanning and contacts, 203–205
registration and waiver of liability, 220
team replacement and regeneration, 216
team site visit and test cases, 206–209
university academic affiliations and sustainability, 213–216
otologic concerns, 177–179
prenatal counseling and diagnosis, multidisciplinary team, 146
need for prenatal counseling, 146–148
role of maternal-fetal medicine, 148
ultrasonography, 148–150
presurgical dentofacial orthopedic management, 169–176
Dynaclef, 174–175
historical perspective, 170
nasalveolar molding, 170–174
objectives of, 170
presurgical orthopedics appliance, 161–168
Latham technique, 161–167
benefits, 163–166
bilateral cleft lip and palate, 162–163
unilateral cleft lip and palate, 162
what is known, 166–167
rhinoplasty for, 189–202
cleft nasal deformity anatomy, 189–190
surgical procedures and timing, 190–201
using 501c3 foundations in care of children with, 221–228
domestic, 221–223
international, 224–228
velopharyngeal dysfunction, 181–188
anatomy, 181–182
cause, 182–183
diagnosis, 183
perceptual speech evaluation, 183–186
terminology, 182
treatment, 186–187
Cleft rhinoplasty. See Rhinoplasty.
Congenital facial anomalies. See Cleft lip and palate.
Counseling, prenatal, on cleft lip and palate, 146–148

D
Dentofacial orthopedic management, presurgical, of cleft lip and palate, 169–176
Dentofacial (continued)
Dynaclift, 174–175
historical perspective, 170
nasoalveolar molding, 170–174
objectives of, 170
Dynaclift, for presurgical management of cleft patients, 174–175

E
Ear tubes, dysfunction of, in cleft lip and plate patients, 177–179
Eustachian tube dysfunction, in cleft lip and plate patients, 177–179

F
Feeding, infants with cleft lip and palate, 153–159
infant feeding and swallowing, 153–157
feeding challenges, 154–155
feeding modifications, 155–157
normal anatomy and physiology, 154
postoperative feeding, 157
Foundations, 501c3, for care of cleft and craniofacial defects in children, 221–228
A Smile for a Child Foundation, 221–225
distribution of funds, 222–223
fundraising, 222
infrastructure, 222
initial founding, 221–222
longevity of, 223
Free to Smile Foundation, 224–228
accountability, 227–228
board of directors, 224–225
fundraising, 225–226
growth, 226–227
initial founding, 224
Free to Smile Foundation, 224–228
accountability, 227–228
board of directors, 224–225
fundraising, 225–226
growth, 226–227
initial founding, 224
Furlow palatoplasty, for children with velopharyngeal dysfunction, 186–187

G
Grayson nasoalveolar molding device, for presurgical management of cleft patients, 170–174

I
International missions, for management of facial clefts, 203–220
academic and ambassadorial exchange, 213
advance planning and contact, 205–206
ambassadorial service, 203
extra considerations, 209–211
operating room instrumentation turnover facilitation, 209–210
water health, 210–211
financial alchemy, 216–218
patient and clinic logistics, 211–213
patient record/photograph use consent document, 219
preplanning and contacts, 203–205
registration and waiver of liability, 220
team site visit and test cases, 206–209
university academic affiliations and sustainability, 213–216
Free to Smile Foundation, 224–228
accountability, 227–228
board of directors, 224–225
fundraising, 225–226
growth, 226–227
initial founding, 224
L
Latham technique, presurgical orthopedics appliance for cleft defect, 161–168
benefits, 163–166
bilateral cleft lip and palate, 162–163
unilateral cleft lip and palate, 162
what is known, 166–167
Lip taping, in presurgical dentofacial orthopedic management of cleft patients, 169–176
Lip, cleft. See Cleft lip and palate.

M
Maternal-fetal medicine, role in management of cleft lip and palate patients, 146
Medical nonprofit organizations. See Foundations.
Middle ear dysfunction, dysfunction of, in cleft lip and plate patients, 177–179
Missions, international, for management of facial clefts, 203–220
academic and ambassadorial exchange, 213
advance planning and contact, 205–206
ambassadorial service, 203
extra considerations, 209–211
operating room instrumentation turnover facilitation, 209–210
water health, 210–211
financial alchemy, 216–218
patient and clinic logistics, 211–213
patient record/photograph use consent document, 219
preplanning and contacts, 203–205
registration and waiver of liability, 220
team site visit and test cases, 206–209
university academic affiliations and sustainability, 213–216
team site visit and test cases, 206–209
university academic affiliations and sustainability, 213–216
Molding, presurgical orthopedic, for cleft patients, 169–176
Multidisciplinary team, for management of cleft lip and palate patients, 146
Multiview speech video fluoroscopy, in diagnosis of velopharyngeal dysfunction, 183, 185–186

N
Nasal revision. See Rhinoplasty.
Nasal tip, surgery on, in cleft lip and palate patients, 194–195
Nasoendoscopy, video, in diagnosis of velopharyngeal dysfunction, 183, 184–185
Nasometry, in diagnosis of velopharyngeal dysfunction, 185
Nonprofit organizations. See Foundations.

O
Orthopedic management, presurgical, of cleft lip and palate, 161–168, 169–176
dentofacial, 169–176
   Dynacleft, 174–175
   historical perspective, 170
   nasoalveolar molding, 170–174
   objectives of, 170
   Latham technique, 161–168
   benefits, 163–166
   bilateral cleft lip and palate, 162–163
   Latham technique, 161–167
   unilateral cleft lip and palate, 162
   what is known, 166–167
Osteotomies, dorsum or nasal, in cleft lip and palate patients, 194
Otitis media with effusion, in cleft lip and plate patients, 177–179
Otológic concerns, for cleft lip and plate patients, 177–179
Otorhinolaryngology assessment, in cleft lip and plate patients, 177–179

P
Palate, cleft. See Cleft lip and palate.
Palatoplasty, Furlow, for children with velopharyngeal dysfunction, 186–187
Perceptual speech evaluation. See Speech evaluation, perceptual.
Pharyngeal flap, for children with velopharyngeal dysfunction, 187
Pharyngoplasty, sphincter, for children with velopharyngeal dysfunction, 187
Piriform rim, surgical augmentation of, in cleft lip and palate patients, 194–195
Postoperative management, of infants with cleft lip and palate, 157–158
   feeding, 157
   wound care, 157–158
Premaxilla, surgical augmentation of, in cleft lip and palate patients, 194–195
Prenatal care, counseling and ultrasound diagnosis of cleft lip and palate, 145–151
Presurgical orthopedic management, of cleft lip and palate, 161–168, 169–176
dentofacial, 169–176
   Dynacleft, 174–175
   historical perspective, 170
   nasoalveolar molding, 170–174
   objectives of, 170
   Latham technique, 161–168
   benefits, 163–166
   bilateral cleft lip and palate, 162–163
   Latham technique, 161–167
   unilateral cleft lip and palate, 162
   what is known, 166–167
Rib cartilage, for rhinoplasty in cleft lip and palate patients, 198–201

S
Speech evaluation, perceptual, in children with velopharyngeal dysfunction, 183–186
   audible nasal emission, 184
   excessive nasal resonance (hyponasality), 183–184
   multiview speech video fluoroscopy, 185–186
   nasometry, 186
   speech misarticulations related to, 184
   video nasoendoscopy, 184–185
Speech therapy, for children with velopharyngeal dysfunction, 186
Surgical management, of children with velopharyngeal dysfunction, 186–187
Swallowing, in infants, 153–157

U
Ultrasonography, in prenatal diagnosis of cleft lip and palate patients, 149–150

V
Velopharyngeal dysfunction, in children with cleft palate, 181–188
   anatomy, 181–182
   cause, 182–183
   diagnosis, 183
   perceptual speech evaluation, 183–186
      audible nasal emission, 184
      excessive nasal resonance (hypernasality), 183–184
   multiview speech video fluoroscopy, 185–186
   nasometry, 186
   speech misarticulations related to, 184
   video nasoendoscopy, 184–185
   terminology, 182
   treatment, 186–187
      Furlow palatoplasty (double opposing Z-plasty), 186–187
      nonsurgical, 186
      pharyngeal flap, 187
      posterior wall augmentation, 186
      sphincter pharyngoplasty, 187
Velopharyngeal insufficiency, 182
Velopharyngeal mislearning, 182
Video fluoroscopy, multiview speech, in diagnosis of velopharyngeal dysfunction, 183, 185–186
Video nasoendoscopy, in diagnosis of velopharyngeal dysfunction, 183, 184–185

W
Wound care, postoperative, of infants with cleft lip and palate, 157–158
