Index

Note: Page numbers of article titles are in **boldface** type.

**A**
Adverse drug events, in oral and maxillofacial surgery, 141–149
   in anesthesia, 142–148
      contributing factors, 143
      improving medication safety education, 145–146
      proper management of anesthetic agents, 146–147
      proper management of emergency medication, 147–148
      reducing the incidence of, 144–145
      types of, 142–143
   definitions, 141–142
   identifying and managing, 142
   implementing a medication safety plan, 148
Adverse events, quality improvement and reporting systems for, 229–238
Airway assessment, in preoperative planning and preparation, 134
Ambulatory oral surgery, patient safety in. See Oral and maxillofacial surgery.
Analgesia, preoperative, intraoperative, and postoperative, 136
Anesthesia, limiting medication errors and adverse drug events, 141–149
   definitions, 141–142
   identifying and managing, 142
   implementing a medication safety plan, 148
   in oral and maxillofacial surgery, 142–148
      contributing factors, 143
      improving medication safety education, 145–146
      proper management of anesthetic agents, 146–147
      proper management of emergency medication, 147–148
      reducing the incidence of, 144–145
      types of, 142–143
   monitoring, 159–168
      parameters and modalities of, 161–167
         circulation, 164–166
         heart rate and rhythm, 166–167
         level of consciousness, 161
         oxygenation, 161–163
         ventilation, 163–164
      pursuit of patient safety in, 160
   standards and guidelines, 160
   risks of, preoperative preparation and planning for, 137–138
   simulation training for office-based anesthesia team, 169–178
      critical care pathways and emergency manuals, 173–174
      definition, 169–170
      emergency drills, learnings from, 171–173
      future of, 177
      impact of, 174–176
      need for office-based, 170
      roles and responsibilities, 174
      scenarios and resources for, 176–177
      as standard of care, 177
      team function, 173
      types of simulators, 170–171
Anesthetics, specific. concerns for discharge criteria, 203–204
Antibiotics, prophylactic, before surgery, 135–136
Auscultation, pretracheal, in anesthetic monitoring, 163

**B**
Bleeding, control of, in discharge criteria, 200–201

**C**
Capnography, in anesthetic monitoring, 163–164
Checklists, in quality improvement programs, 229–238
   surgical, in preventing wrong-site surgery, 155
Circulation, in anesthetic monitoring, 164–166
Colorimetric CO2 detectors, in anesthetic monitoring, 164
Continuity of care, preoperative preparation and planning for, 138–139
Crew resource management, and patient safety, 127
Critical care pathways, in simulation training for office-based anesthesia team, 173–174

**D**
Diabetic patients, discharge criteria concerns after oral surgery, 204
Discharge criteria, factors impacting, after oral and maxillofacial surgery, 197–208
   postoperative checkup, 206
   review of specific criteria, 198–203
Discharge (continued)
- control of bleeding, 200–201
- control of postoperative pain, 202–203
- control of vomiting/nausea, 201–202
- level of consciousness, 198–199
- postoperative instructions, 203
- stability of vital signs, 199–200
- special anesthetic concerns, 203–204
- ketamine, 204
- pharmacologic options, 204
- special patient concerns, 204–205
- diabetic patients, 204
- obstructive sleep apnea, 204–205
- pediatrics, geriatrics, and special needs patients, 205
- specific procedures, 205–206
- standard, 198

E
- Electrical safety, and calibration of medical/surgical equipment, 210–212
- Emergency manuals, in simulation training for office-based anesthesia team, 173–174
- Emergency power, for patient safety, 219
- Equipment safety, in oral and maxillofacial surgery, 209–221
  - back-up power and lighting, 219
  - electrical safety and calibration, 210–212
  - medical gases, 217–219
  - radiation safety, 216–217
  - sterilizer maintenance, 212–216
- Errors, medical. See Medical errors.
- Extractions. See Tooth extractions.

F
- Fire safety, for oral and maxillofacial surgeon and surgical staff, 179–187
  - causes of fire, 180
  - fuel sources, 180
  - ignition sources, 180
  - management, 184–185
  - management of a fire, 182–183
  - oxidizer, 180–182
  - preparation, 183–184
  - roles in, 183
  - types of, 185–186

G
- Gases, medical, safety of, 217–219
- Geriatric patients, discharge criteria concerns in, 205
  - preoperative preparation and planning for, 137

H
- Heart rate, in anesthetic monitoring, 166–167
- Heart rhythm, in anesthetic monitoring, 166–167

High-reliability organizations, 121, 127–128
- characteristics of, 128
- History, medical, in preoperative planning and preparation, 131–132

I
- Informed consent, for risk management and patient safety, 224–225
- Intraoperative analgesia, preoperative planning for, 136

K
- Ketamine, concerns about, in discharge criteria, 204

L
- Legal issues, malpractice system and patient safety, 223–227
  - risk management impact on, 224–226
    - informed consent, 224–225
    - patient safety integrated into, 225–226
    - torts system compared with disclosure and admission, 226–227
    - anatomy of a malpractice claim, 226
    - anatomy of disclosure and admission, 226–227
  - preventing wrong-site surgery liability claims, 151–157
- Level of consciousness, in anesthetic monitoring, 161
- in discharge criteria, 198–199
- Liability. See Legal issues.
- Lighting, back-up, for patient safety, 219

M
- Malpractice system, patient safety and, 223–227
  - risk management impact on, 224–226
    - informed consent, 224–225
    - patient safety integrated into, 225–226
    - torts system compared with disclosure and admission, 226–227
    - anatomy of a malpractice claim, 226
    - anatomy of disclosure and admission, 226–227
  - Medical errors, quality improvement and reporting systems for, 229–238
    - root cause analysis of factors leading to, 128
  - Medical history, in preoperative planning and preparation, 131–132
  - Medication errors, in oral and maxillofacial surgery, 141–149
    - in anesthesia, 142–148
      - contributing factors, 143
      - improving medication safety education, 145–146
      - proper management of anesthetic agents, 146–147
proper management of emergency medication, 147–148
reducing the incidence of, 144–145
types of, 142–143
definitions, 141–142
identifying and managing, 142
implementing a medication safety plan, 148
Medication reconciliation, in preoperative planning and preparation, 132–133
Monitoring, during anesthesia in oral and maxillofacial surgery, 159–168
parameters and modalities of, 161–167
heart rate and rhythm, 166–167
level of consciousness, 161
oxygenation, 161–163
ventilation, 163–164
pursuit of patient safety in, 160
standards and guidelines, 160

N
Nausea, postoperative, in discharge criteria, 201–202
preemptive management before surgery, 134–135

O
Obstructive sleep apnea, outpatient anesthesia for patients with, 189–196
intraoperative management, 192
postoperative management, 192–194
criteria for discharge, 194, 204–205
medications, 193–194
rapid eye movement sleep rebound, 192–193
preoperative management, 190–192
clinical assessment, 191
overnight vs home polysomnography, 190–191
reflux and aspiration precautions, 191
STOP-BANG questionnaire for, 190
use of CPAP, 191
where to provide care, 191
Oral and maxillofacial surgery, patient safety in. See Patient safety.
Outpatient anesthesia. See also Anesthesia.
safety in patients with obstructive sleep apnea, 189–196
Oxygenation, in anesthetic monitoring, 161–163

P
Pain control, postoperative, in discharge criteria, 202–203
preoperative, intraoperative, and postoperative, 136
Patient safety, in oral and maxillofacial surgery, 121–238
anesthesia monitoring, 159–168
parameters and modalities of, 161–167
pursuit of patient safety in, 160
standards and guidelines, 160
discharge criteria, factors impacting, 197–208
postoperative checkup, 206
review of specific criteria, 198–203
special anesthetic concerns, 203–204
special patient concerns, 204–205
specific procedures, 205–206
standard, 198
equipment safety, maintenance, and inspection, 209–221
back-up power and lighting, 219
electrical safety and calibration, 210–212
medical gases, 217–219
radiation safety, 216–217
sterilizer maintenance, 212–216
fire safety, 179–187
causes of fire, 180
fuel sources, 180
management, 184–185
management of a fire, 182–183
oxidizer, 180–182
preparation, 183–184
roles in, 183
types of, 185–186
general concepts, 121–129
categories of severity of errors, 122
crew resource management, 127
high-reliability organizations, 121, 127–128
resources on, 128
root cause analysis of factors leading to error, 128
safety culture, 127–128
simulation training, 127
systems to enhance patient safety, 126–127
types of errors in, 124
limiting medication errors and adverse drug events, 141–149
in anesthesia, 142–148
definitions, 141–142
identifying and managing, 142
implementing a medication safety plan, 148
malpractice system, 223–227
risk management impact on, 224–226
torts system compared with disclosure and admission, 226–227
obstructive sleep apnea, outpatient anesthesia for patients with, 189–196
intraoperative management, 192
postoperative management, 192–194
preoperative management, 190–192
preoperative preparation and planning, 131–140
airway assessment, 134
Index

Patient (continued)

continuity of care, 138–139
in geriatric patients, 137
medical history, 131–132
medication reconciliation, 132–133
pain control, 136
in pediatric patients, 136–137
preemptive management of nausea and vomiting, 134–135
prophylactic antibiotics, 135–136
risks in anesthetic management, 137–138
tracking data, 133–134
preventing wrong-site surgery, 151–157
causes of, 152–153
preventing wrong tooth extraction, 154–157
utility for, 153–154
quality improvement and reporting systems, 229–238
assessment of safety programs, 232–234
defining patient safety, 229–230
external drivers of safety, 234
future directions, 234–236
implementing a safety program, 230–232
promoting a safety culture, 230
simulation training for office-based anesthesia, 169–178
critical care pathways and emergency manuals, 173–174
definition, 169–170
emergency drills, learnings from, 171–173
future of, 177
impact of, 174–176
need for office-based, 170
roles and responsibilities, 174
scenarios and resources for, 176–177
as standard of care, 177
team function, 173
types of simulators, 170–171
Pediatric patients, discharge criteria concerns in, 205
preoperative preparation and planning for, 136–137
Planning, preoperative. See Preoperative preparation and planning.
Postoperative analgesia, preoperative planning for, 136
Postoperative nausea and vomiting, control of, in discharge criteria, 201–202
Power, back-up, for patient safety, 219
Preemptive management, of nausea and vomiting, 134–135
Preoperative preparation and planning, for oral and maxillofacial surgery, 131–140
airway assessment, 134
continuity of care, 138–139
in geriatric patients, 137
medical history, 131–132
medication reconciliation, 132–133
pain control, 136
in pediatric patients, 136–137
preemptive management of nausea and vomiting, 134–135
prophylactic antibiotics, 135–136
risks in anesthetic management, 137–138
tracking data, 133–134
Preparation, preoperative. See Preoperative preparation and planning.
Pretracheal auscultation, in anesthetic monitoring, 163
Prophylactic antibiotics, before surgery, 135–136
Pulse oximetry, in anesthetic monitoring, 161–163
Q
Quality improvement, and reporting systems in oral and maxillofacial surgery, 229–238
assessment of safety programs, 232–234
benchmarking, 233–234
self-assessment tools, 232–233
defining patient safety, 229–230
external drivers of safety, 234
future directions, 234–236
implementing a safety program, 230–232
managing adverse events, 230–232
minimizing risks, 230
promoting a safety culture, 230
R
Radiation safety, of diagnostic radiation equipment, 216–217
Risk management, impact on patient safety, 224–226
informed consent, 224–225
patient safety integrated into, 225–226
Root cause analysis, of factors leading to errors, 128
S
Safety, patient. See Patient safety.
Simulation training, for office-based anesthesia team, 169–178
critical care pathways and emergency manuals, 173–174
definition, 169–170
emergency drills, learnings from, 171–173
future of, 177
impact of, 174–176
need for office-based, 170
roles and responsibilities, 174
scenarios and resources for, 176–177
as standard of care, 177
team function, 173
types of simulators, 170–171
Sleep apnea. See Obstructive sleep apnea.
Special needs patients, discharge criteria concerns in, 205
Sterilizer maintenance, for patient safety, 212–216
STOP-BANG questionnaire, preoperative, to detect obstructive sleep apnea, 190
Surgery, oral and maxillofacial, patient safety in. See Patient safety.
Surgical fires. See Fire safety.

T
Teams, simulation training for office-based anesthesia, 169–178
  critical care pathways and emergency manuals, 173–174
  definition, 169–170
  emergency drills, learnings from, 171–173
  future of, 177
  impact of, 174–176
  need for office-based, 170
  roles and responsibilities, 174
  scenarios and resources for, 176–177
  as standard of care, 177
  team function, 173
  types of simulators, 170–171
Tooth extraction, preventing wrong-site surgery, 151–157
  causes of, 152–153
  checklists, 155
  developing the surgical team, 154–155
  education, 154
  sign in, 155–156
  sign out, 156–157
  time out, 156
  utility for, 153–154
Torts system, compared with disclosure and admission, 226–227
  anatomy of a malpractice claim, 226
  anatomy of disclosure and admission, 226–227
Training, simulation. See Simulation training.

V
Ventilation, in anesthetic monitoring, 163–164
  capnography, 163–164
  direct observation, 163
  pretracheal auscultation, 163
Vital signs, stability of, in discharge criteria, 199–200
Vomiting, postoperative, in discharge criteria, 201–202
  preemptive management before surgery, 134–135

W
Wrong-site surgery. See Tooth extraction.
